

ArkLight Power™ LLC Announces Its Formation — Powering the Edge. Lighting the Kingdom.

Houston-based ArkLight Power™ launches to deliver rapid-deployment, on-site power systems for data centers, AI infrastructure, and humanitarian missions.

Houston, Texas Nov 5, 2025 ([Issuewire.com](https://www.issuewire.com)) - ArkLight Power™ LLC, a Houston-based, Wyoming-registered energy and technology company, today announced its official formation and mission: to deliver rapid-deployment, on-site power systems that energize the next era of digital and humanitarian infrastructure — from the data edge to the Kingdom frontier.

ArkLight Power™ was founded on a simple but powerful idea: the world's growing demand for energy and computing power can't be met responsibly by waiting years for grid interconnections. The solution is to bring generation directly to where the power is needed — fast, modular, and mission-aligned.

Built on a proprietary platform with over a decade of proven engineering lineage, ArkLight's ArkNode™ and ArkCell™ systems enable deployment of full-scale power capacity in as little as nine to twelve months, compared with the 18 to 30-month ERCOT delays typical for new utility connections. Each ArkNode integrates one or more ArkCells — self-contained generation modules engineered for high uptime, scalability, and global replication.

"We're here because critical industries can't afford to wait," said Brad Kellam, Founder and CEO. "Data centers, AI operators, and industrial users need reliable, sovereign power now — not years from now. ArkLight Power™ brings that capability to the ground, fast."

From 50 megawatts to virtually unlimited capacity, ArkLight Power™ systems are designed to minimize reliance on traditional grid infrastructure, reduce carbon footprints, and increase operational reliability.

The company delivers scalable, modular power that meets the performance needs of the digital and industrial sectors while advancing the future of edge computing and decentralized infrastructure.

ArkLight Power™'s Kingdom mission is governed through the ARK Utility Token (ARKLP) — a DAO (Distributed Autonomous Organization) structure that ensures transparent community participation and alignment between purpose and operation.

Low-latency inference. Power for the grid. Light for the Kingdom.

Motto: One Joule. One Spark. One step toward the ARK.
