Costimizer Launches Al-Powered Cloud Cost Optimization Platform for Global Enterprises

New 'agentic Al' platform that does everything, it autonomously find wasted resources and automate cloud savings, backed by a hands-on expert team.

Noida, Uttar Pradesh Nov 16, 2025 (<u>Issuewire.com</u>) - Costimizer today announced the global launch of its Al-powered cloud cost optimization platform. <u>Costimizer</u> is the first platform to match agentic Al with a hands-on, expert team and go beyond passive reporting to actively automate cloud financial management to users of Amazon Web Services (AWS), Microsoft Azure, and Google Cloud (GCP). Designed to serve global enterprises.

With the pace that current organizations are pacing, they are often using multi-cloud, and costs are constantly skyrocketing. Conventional FinOps tools tend to only report on money that has been spent, and teams have to go on and dig deep to find savings.

Costimizer is aimed at repairing this defective model. It offers a real Multi-Cloud Resource Inventory, which gives an agentic dashboard to track all resources of all cloud providers and makes orphaned resources a thing of the past. The platform is based on real-time AI anomaly detection to identify cost spikes and its Advanced Kubernetes Visibility divides costs into cluster, namespace, deployment, and even pod.

Cloud cost management has been a reactive, manual process over the years. Sourabh Kapoor, CEO of Costimizer says, "We created Costimizer to put an end to manual process. Our agentic Al do not simply provide you with a 200-item list of their recommendations. It provides you with customized tradeoff suggestions, such as, 'Option A will save 30% and there is no risk of performance loss, whereas Option B will save 50% in case you can accept a 5% increase in read-time.' Thereafter, it actively implements such savings around the clock. We are providing enterprises with the predictive control they never had, and making FinOps not a reporting service but an automated strategic benefit."

In contrast to the traditional platforms, the Agentic Optimization of Costimizer has a full set of tasks, including rightsizing and Spot Instance management, autonomously and safely managed, as well as automated storage cleanup, including deleting unattached disks, old snapshots, etc. Proactive Budget Enforcement is also possible through the platform, whereby teams can specify quotas by project or team and have AI agents enforce them automatically. This is accompanied by Engineer-Centric Dashboards which give explicit, actionable cost data right in developer workflows.

Costimizer also appreciates the fact that technology is not the entire solution. The platform has a practical and professional team, which provides team support via shared Slack channels, rather than support tickets. In the case of enterprises, a specific FinOps team may be assigned to an account, which will be a continuation of their own personnel and will actively control spending.

Costimizer is now available globally. Enterprises can get started in minutes to find and eliminate cloud waste.

Discover how Costimizer helps you cut cloud costs by 30% in just a week. Book a free demo now.
