

IMH Group Offers Free Pallet Racking Layout & CAD Design for Southern California Warehouses

Free on-site measurement visits and CAD layout drawings help warehouses maximize pallet positions and optimize material flow, with configurations tailored to each facility.

Riverside, California Nov 6, 2025 ([Issuewire.com](https://www.issuewire.com)) - IMH Group Inc is now offering free pallet racking layout and CAD design services for warehouses throughout Southern California. This service provides warehouse teams with a clear storage plan before purchasing equipment, helping them maximize pallet positions, improve workflow, and avoid costly reconfiguration or guesswork.

IMH Group performs on-site walkthroughs to take measurements, evaluate forklift types and aisle widths, confirm clearances, and understand how inventory moves throughout the warehouse. From there, the company produces a custom CAD layout showing upright heights, beam spacing, pallet capacity counts, flue gaps, and operational flow recommendations based on the facility's real needs.

"Most warehouses don't actually know how many pallet positions they could have until someone diagrams it," said Alex Tito, National Account Manager at IMH Group Inc. "When we walk the space

and create a real layout, it gives the customer clarity and confidence before making decisions.”

IMH Group is not only a supplier of [pallet racking for warehouses](#) the company also manufactures racking through a dedicated production partner. This allows for both standard and custom solutions, including specific upright heights, beam profiles, color matching, and capacity requirements for heavier or unique inventory. The ability to manufacture directly provides flexibility that traditional rack distributors typically cannot offer.

The company services distribution centers, manufacturers, 3PLs, cold storage facilities, automotive warehouses, food and beverage operations, and e-commerce fulfillment spaces across the Inland Empire, Los Angeles County, and Orange County. [Pallet Rack Installation](#), dismantle, relocation, and permitting support are also available.

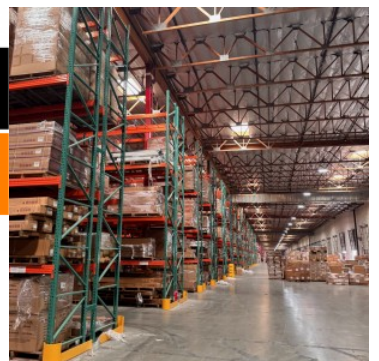

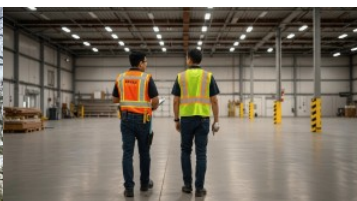

About the representative behind the service effort: Alex Tito leads IMH Group’s warehouse layout and project development work throughout California. While based in Riverside, he has coordinated projects nationwide, including Nevada, New Jersey, and Florida. Alex Tito has been involved in more than 1 million square feet of pallet racking projects across the United States, with over 600,000 square feet completed in California alone. His approach centers around layout clarity, operational flow, and maximizing warehouse value per square foot.

Warehouses looking to schedule a free on-site layout and CAD design consultation may do so directly. To schedule your free on-site warehouse layout & CAD design visit, go to [Schedule a Free On-Site Racking Visit](#).
