

Ju Wei's 13-Year Global Trade Impact

Ju Wei Industrial Celebrates 13 Years of Global Trade Leadership in Sustainable Materials and Cross-Border Supply Chains.

Northern Taiwan, Taiwan Nov 8, 2025 ([Issuewire.com](https://www.issuewire.com)) - Advancing EPDM, ENGAGE™, and recycled plastics across North America and Asia while supporting the global transition toward circular-economy practices.

Ju Wei Industrial Co., Ltd. announces its 13-year milestone in international trade, marking more than a decade of growth, cross-border collaboration, and sustainable material development across Asia and North America.

Founded in Taiwan, Ju Wei Industrial has evolved from a regional trading firm into a **multi-country sourcing and supply-chain partner**, supporting manufacturers in **Canada, the United States, Vietnam, Malaysia, and the broader Asia-Pacific region**.

The company specializes in providing high-quality **EPDM, ENGAGE™ performance polymers**, and a wide range of **certified recycled plastics**, including **RPET, HDPE, and PP**, to meet the expanding

global demand for sustainable and cost-efficient materials.

Building a Global Footprint Across Asia and North America

Over the past 13 years, Ju Wei has established a reliable network of suppliers and buyers, enabling the flow of industrial and recycled materials across multiple markets.

The company has built strong operational capabilities including:

- ❑ **Cross-border logistics coordination**
- ❑ **International certification management (GRS/RCS)**
- ❑ **SDS/COA/COO handling**
- ❑ **Consistent material quality evaluation**
- ❑ **Collaboration with recycling plants and manufacturers**

These capabilities have positioned Ju Wei as a strategic partner for manufacturers transitioning toward more sustainable production models.

“Trade is about more than moving goods—it’s about building long-term trust.

For 13 years, we have built a network of stable partnerships that now support the global shift toward circular materials.”

— *Wei Ling Wang, Founder of Ju Wei Industrial Co.,Ltd.*

Strengthening the Circular-Economy Supply Chain

In recent years, global demand for **RPET** and other recycled plastics has surged as brands work toward sustainability and net-zero commitments. Ju Wei Industrial has played a critical role by sourcing and coordinating recycled materials from **Canada and the U.S.** into **Vietnam, Malaysia, and Asia**, helping factories reduce dependency on virgin plastics.

The company has dedicated resources to:

- ❑ Integrating recycled materials into existing manufacturing supply chains
- ❑ Supporting regional recyclers in meeting international quality standards
- ❑ Improving transparency and traceability within material sourcing
- ❑ Aligning with global ESG and sustainability policies

A New Era: Expanding Through Uprime Link Enterprise LLC

In 2025, Ju Wei Industrial Co.,Ltd. established **Uprime Link Enterprise LLC** in the United States to extend its international presence and accelerate collaboration with Western and Australian recycling markets.

The combined platform now aims to:

- ❑ Strengthen partnerships with U.S. & Canadian recycling facilities
- ❑ Explore new opportunities with Australian RPET producers
- ❑ Support Asia’s rapidly growing demand for certified recycled materials
- ❑ Promote long-term circular-economy cooperation across continents

“Our future lies in connecting global recycling strengths with Asia’s innovation and

manufacturing capacity.

We will continue to expand into markets that share our vision for sustainable, transparent supply chains.”

— *Wei Ling Wang*

About Ju Wei Industrial Co., Ltd

Founded in Taiwan, **Ju Wei Industrial** is an international trading company with 13 years of experience sourcing and supplying EPDM, ENGAGET[™] polymers, and certified recycled plastics including RPET, HDPE, and PP. The company supports cross-border logistics, documentation, and sustainable material integration across Asia and North America.

About Uprime Link Enterprise LLC

Based in the United States, **Uprime Link Enterprise** focuses on sustainable materials sourcing, circular-economy partnerships, and cross-border supply-chain innovation connecting North America, Australia, and Asia.
