

Live Human AI launches Enterprise Voice AI that sounds human and proves ROI at scale

Live Human AI debuts an enterprise Voice AI that speaks naturally, scales outbound calling, and delivers auditable, ROI-proven results.

generation Enterprise Voice AI: a system engineered to speak naturally, operate at high outbound volumes, and deliver measurable revenue impact with transparent, auditable controls.

*“Voice AI shouldn’t sound like a script—it should sound like a person with a job to do,” said **Santos Gonzalez, CEO of Live Human AI**. “We’ve embedded that belief into our prompts, rules, and QA. The result is an assistant that feels human—while remaining measurable, controllable, and enterprise-ready.”*

What’s Groundbreaking:

- **Humanized speech as a first-principle** — System-level guardrails and script rules enforce free-flowing, natural talk tracks that avoid robotic or salesy tone, unlocking longer engagements and higher intent signals.
- **Outbound at enterprise scale** — Built for large dial volumes to prove revenue impact quickly—distinct from research/chat tools—unlocking rapid time-to-value for sales and operations leaders.
- **Auditable conversation design** — Master Prompt + skeleton script + versioning ensures every dialog is reproducible, reviewable, and customizable by brand and vertical.
- **Closed-loop learning from recordings** — Continuous training on real call outcomes drives week-over-week lifts in connection quality, next-best-turn accuracy, and escalation logic.
- **Transparent stack and portal** — Native integrations (e.g., Go High Level) and a client dashboard expose call counts, outcomes, error rates, and recordings—no black boxes.
- **Verticalized playbooks** — Domain-specific scripts and policies for regulated and complex environments (healthcare, home services, higher ed), accelerating compliant deployments.
- **Operational resilience under regulation** — Proven pivots (e.g., email-first in restricted markets) demonstrate readiness for multi-region rollout and enterprise governance.

Why It Matters:

- **Natural conversations that convert** — Human-like phrasing increases receptivity and reduces hang-ups.
- **Measured impact** — Outbound motion plus clear instrumentation surfaces connection rates, pipeline influence, and conversion signals.
- **Trust at scale** — Versioned scripts, call recordings, and QA trails provide evidence for leaders,

auditors, and compliance teams.

Availability: Live Human AI's Enterprise Voice AI is available today to qualified customers. Briefings and demos available upon request.

About Live Human AI: Live Human AI builds voice systems that sound human and deliver measurable revenue outcomes. The platform combines rigorous conversation design, outbound scale, and closed-loop learning with a transparent client portal. Learn more at livehuman.ai.
