

MindMap AI v2.0 Lets Users Expand Ideas and Refine Styles Themes and Layout Through Continuous Chat

AI mind mapping tool introduces reasoning mode and collaborative editing that preserves user customizations across all visual formats

Wilmington, Delaware Nov 24, 2025 (IssueWire.com) - MindMap AI today announced **MindMap AI V2**, the only mind-mapping platform where AI can expand ideas and refine styles, themes, and layout through continuous chat while preserving every manual edit. The upgrade introduces step by step AI reasoning, a new stability focused AI co-editing, expanded chart formats, and a redesigned styling system that redefines how individuals and teams create and refine complex ideas.

At the core of V2.0 is **AI Thinking Mode**, which uses deliberate, step-by-step reasoning to generate clearer, more logically structured visual maps. Instead of producing surface-level branches, the AI evaluates hierarchy, context, and relationships before creating output, delivering expert-level structure for research, strategic planning, study workflows, and product design.

The release also debuts **MindMark**, a proprietary text-based diff format that enables stable, incremental AI updates. Unlike traditional generative tools that overwrite user work, MindMap AI preserves **every** manual edit layout, spacing, structure, and stylistic adjustments while allowing the AI to expand ideas and modify styles, themes, and layouts through continuous chat.

MindMap AI V2.0 supports **Mind Maps, Logic Charts, and Organization Charts**, allowing users to switch formats instantly with structure maintained across transformations. A rebuilt styling engine introduces new themes, visual controls, and functional widgets such as Priority, Task Completion, and

Due Dates.

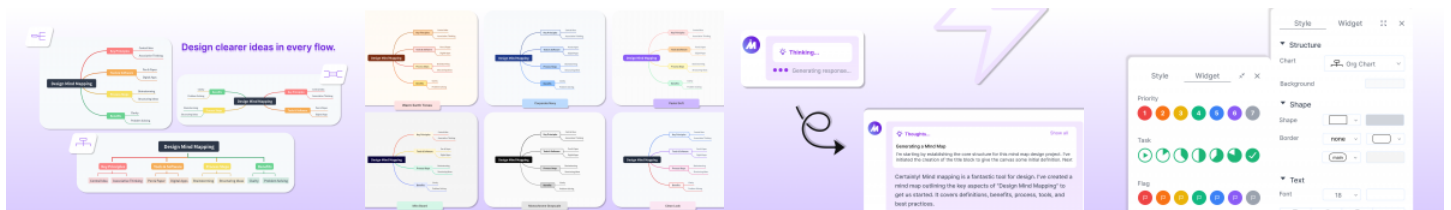

“MindMap AI is now the only platform where AI can collaborate without compromising user control,” said **Prasanth Subendran, Co-founder & CEO of MindMap AI**. “With V2, users get reasoning, stability, and conversational editing in one experience, making visual thinking faster, more accurate, and more intuitive than ever.”

Availability

MindMap AI V2 is now available globally on iOS, Android, and web platforms. Users can visit the official [MindMap AI website](#) or download the app directly from the [App Store](#) and [Google Play](#).

About MindMap AI

MindMap AI is a leading US startup building AI-powered visual thinking software, helping individuals and teams turn complex ideas into clear, structured mind maps. Built with the goal of making thinking more intuitive, MindMap AI pairs step by step AI reasoning with stable chat driven co-editing, allowing users to expand ideas and refine styles, themes, and layout without losing manual edits. The platform supports multiple visual formats and is available across iOS, Android, and web. For more information, visit <https://mindmapai.app>
