

Sherratt Group Ltd Launches Specialist Japanese Knotweed Removal Across the UK

The UK's trusted grounds maintenance experts enhance their environmental and infrastructure solutions for commercial and public-sector clients.

Greenfield, Flintshire Nov 6, 2025 ([issuewire.com](https://www.issuewire.com)) - As environmental challenges and property management demands continue to evolve, Sherratt Group Ltd, a leading UK-based grounds maintenance and vegetation management company, has strengthened its service portfolio by introducing two dedicated offerings: [Japanese Knotweed Removal](#) and Commercial Fencing Services. Both services reflect the company's commitment to sustainable site management, safety, and long-term property protection.

Tackling Invasive Plants Through Expert Japanese Knotweed Removal

Japanese Knotweed remains one of the most destructive invasive plant species in the United Kingdom. Its rapid growth and aggressive root systems can cause severe damage to foundations, drainage systems, and other structures. Property owners who fail to control or remove it can face legal and financial consequences under the Wildlife and Countryside Act.

To help combat this growing issue, **Sherratt Group Ltd** has launched a specialist **Japanese Knotweed Removal** service. This program is designed to offer complete solutions — from professional

identification and surveys to certified eradication and ongoing aftercare.

The company's team of trained specialists follows industry best practices, ensuring compliance with UK environmental legislation. Using a mix of excavation, herbicide application, and controlled disposal methods, Sherratt Group Ltd ensures that infestations are removed safely and permanently.

"Our priority is to restore affected sites and protect the structural integrity of our clients' properties," said a spokesperson for **Sherratt Group Ltd**. "Japanese Knotweed removal demands expertise, patience, and precision — qualities we've honed over more than five decades in environmental management."

The service also includes post-removal monitoring and maintenance, ensuring that once Japanese Knotweed is eliminated, it does not return. This long-term approach has made Sherratt Group Ltd a trusted partner for commercial property owners, local councils, and developers seeking full compliance and environmental responsibility.

Securing Properties with Professional Commercial Fencing Services

In addition to its environmental work, Sherratt Group Ltd has expanded into the infrastructure domain with high-quality Commercial Fencing Services tailored for business parks, educational institutions, and public-sector facilities.

The company's fencing division provides a wide range of durable and secure solutions — including timber fencing, steel security fences, mesh panels, and bespoke perimeter systems. Each installation is planned and executed to meet the unique needs of the site, whether for privacy, access control, or boundary protection.

"Our [Commercial Fencing Services](#) complement our property management expertise," the spokesperson added. "Every client deserves a fencing solution that not only looks professional but also strengthens site security and complies with British safety standards."

From design and sourcing to installation and maintenance, Sherratt Group Ltd's fencing professionals ensure each project adheres to strict quality and safety guidelines. The company also offers environmentally responsible fencing options, incorporating sustainable materials and energy-efficient installation methods wherever possible.

By combining experience with innovation, the company delivers fencing systems that protect commercial spaces while maintaining aesthetic and environmental balance.

A Trusted Partner in Environmental and Property Maintenance

Founded more than 56 years ago, Sherratt Group Ltd has built a strong reputation across the UK for delivering reliable grounds maintenance, vegetation control, landscaping, and arboricultural services. Its longevity in the industry reflects a deep understanding of environmental stewardship and client needs.

The introduction of specialised **Japanese Knotweed Removal** and **Commercial Fencing Services** further strengthens the company's position as a comprehensive service provider capable of addressing both ecological and structural challenges.

Clients from local authorities, housing associations, schools, and private estates trust Sherratt Group Ltd for its professional approach, transparent communication, and sustainable practices. Every project

is delivered with attention to detail and a clear focus on environmental protection and regulatory compliance.

Sustainability and Compliance at the Core

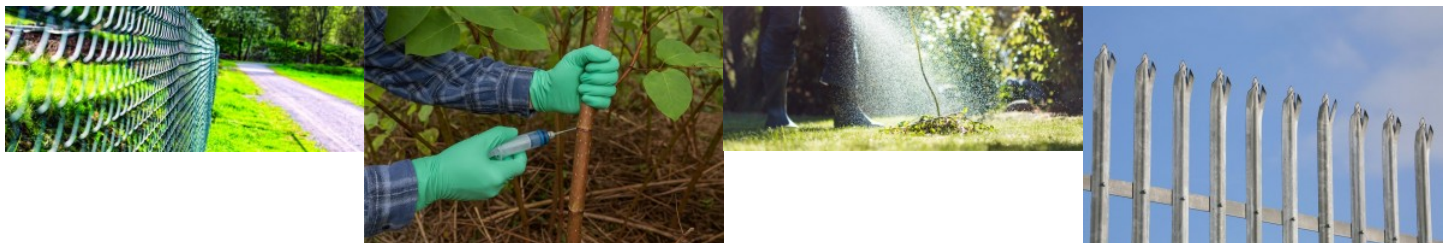

Environmental responsibility has always been a cornerstone of Sherratt Group Ltd's operations. Every Japanese Knotweed Removal project follows government guidelines on waste transportation and disposal, ensuring minimal ecological impact.

Similarly, all fencing installations comply with British Standards for quality and safety. The company's experts conduct full risk assessments before installation to ensure that each project enhances site integrity without disrupting existing ecosystems.

This dual emphasis on environmental care and structural reliability has earned Sherratt Group Ltd its reputation as one of the UK's most dependable partners for landscape and property management solutions.
