

SkyUX × Royoso: Blockchain and AI Power the Next-Generation Investment Platform

Anchorage, Alaska Nov 5, 2025 ([IssueWire.com](https://www.issuewire.com)) - In the fast-evolving world of global fintech, the convergence between trading platform technology and institutional asset allocation has entered a new phase. SkyUX Web3 Exchange Inc. (“SkyUX”) and Royoso International Investment Group LLC (“Royoso”) have signed a strategic cooperation agreement to jointly develop a next-generation global investment and trading platform, integrating blockchain-based trust mechanisms with an AI-driven intelligent research system.

SkyUX, built on a robust Web3 architecture, incorporates on-chain traceability mechanisms, blockchain auditing frameworks, and multi-layer compliance algorithms. Its “Global Trust Framework” and “AI-Compliance Engine” enable real-time monitoring of trading behavior, synchronization of risk metrics, and verification of fund flows. Meanwhile, Royoso operates across 16 global financial centers with over USD 118 billion in assets under management and expertise in quantitative trading, risk modeling, and private asset allocation.

The cooperation focuses on technology integration and product fusion. First, Royoso will connect to SkyUX’s API, allowing unified command execution, bulk strategy deployment, and aggregated returns across client accounts. Second, both sides will co-develop an intelligent trading system — from simulation trading and signal transmission to live execution — embedding AI models and blockchain validation to ensure real-time synchronization of strategy execution and asset security. Finally, the platform will provide users worldwide with transparent, traceable fund flows and compliance reports, embedding regulatory assurance throughout the entire transaction lifecycle.

This technological synergy represents a shift from trading platforms as simple matchmaking tools to comprehensive systems for asset allocation and risk management. Likewise, investment institutions can

now connect directly to blockchain ecosystems and smart trading channels, enhancing efficiency, reducing costs, and building user trust.

As both parties expand their collaborative efforts across the Middle East, Southeast Asia, and Africa, the platform will gain stronger cross-border operational capacity and localized support. The SkyUX × Royoso collaboration sets a new standard for partnerships between digital asset platforms and global investment institutions.

As stated in the agreement: “Innovation is the engine, compliance is the foundation, and trust is the bridge.” When blockchain, AI, and global capital converge, a new pathway for intelligent investing begins to take shape.
