UK Financial Ltd Launches Second ERC-3643 SEC-Ready Token, MayaCat (SMCAT), Once a Meme, Now a Regulated Digital Asset

UK Financial Ltd Launches Second ERC-3643 SEC-Ready Token — The MayaCat (SMCAT) Evolution from Meme to Market Leader

London, England Nov 10, 2025 (Issuewire.com) - info@ukfinancialltd.com

UK Financial Ltd Today announced what is being classified as a groundbreaking move set to redefine both the meme coin and security token landscape. UK Financial Ltd, the parent company of the Maya Preferred Project, has announced the creation of the world's first ERC-3643 compliant security token derived from a meme coin —MayaCat Regulated Security Token (SMCAT).

Once known simply as the light-hearted gold-backed meme token MCAT, the newly transformed SMCAT represents a monumental leap forward: the first meme coin in history to evolve into a fully regulated, asset-backed digital security. Built on the ERC-3643 standard, SMCAT meets global compliance frameworks for identity, transparency, and investor protection — and is backed by over $21 billion USD in gold and silver assets through Maya Preferred (MPRA).

From Meme to Monumental — The Birth of a Token Creator

SMCAT's new business model positions it not merely as a tradable asset but as a token creation platform — an engine for designing and distributing compliant ERC-3643 tokens to banks, institutions, and major corporations seeking to enter the regulated blockchain arena.

The company's bold vision is to make UK Financial Ltd the "Token Creator to the Financial World" — providing the tools, compliance framework, and gold-backed credibility to issue and support institutional-grade digital securities.

Revolutionary Tokenomics

With the transformation from MCAT to SMCAT, the total supply has been reduced from 2 billion tokens to 50 million, a structural overhaul that grants existing holders a 3900% increase in ownership value while simultaneously decreasing the outstanding supply by 88.5%.

This decisive move sets a new precedent for responsible token management — the first time in history a meme-born coin has voluntarily deflated supply and elevated intrinsic value through real-world asset backing and compliance.

A Historic Shift in Digital Finance

SMCAT now stands as the bridge between creativity and compliance — the proof that a meme can evolve into a fully recognized, gold-backed digital financial instrument. Unlike Bitcoin, which famously declared independence from the banking system, SMCAT is building a gateway for banks and institutions to join the blockchain economy safely, legally, and profitably.

"We didn't just create another token," Stated James Dahlke,

President & CEO of UK Financial Ltd & The Maya Preferred Project. "We created a business model that manufactures compliance, security, and gold-backed value — one token at a time."

With this launch, UK Financial Ltd and the Maya Preferred Project once again demonstrate why they are seen as pioneers in bridging traditional finance with digital asset evolution.

Constructed according to ERC-3643 standards, MayaCat Regulated Security Token (SMCAT) features sophisticated regulatory controls such as KYC verification, whitelisting, and compliant transfer restrictions.

Additionally, according to the ERC-3643 standard, the SMCAT token is supported by all three verified smart contracts — the main token contract, the compliance contract, and the identity registry — each publicly verified and viewable on Etherscan.

To View The SMCAT Verified Main Contract On Etherscan:

The system maintains transparency, security, and regulatory readiness, including possible SEC registration.

MayaPro.Pro Wallet Upgrade

UK Financial Ltd is also pleased to announce the successful upgrade of its flagship digital platform, the MayaPro Wallet, the company's official blockchain wallet and central hub for all tokens within the UK Financial Ltd ecosystem — including Maya Preferred (MPRA), SMPRA, WMPRA, UKFL, and SMCAT. Now developed as a Progressive Web Application (PWA), the MayaPro Wallet can be downloaded directly to users' smartphones for instant access. Android users can simply select "Add to Home Screen" after logging in and the download pop-up will be displayed, while iPhone users can tap the share icon (the square with the upward arrow) in Safari and download the MayaPro.Pro App.

The latest update also introduces new functionality allowing coin holders to stake tokens once the company activates the feature, and to purchase UK Financial Ltd–issued tokens directly within the wallet using Ethereum (ETH) or Solana (SOL). This milestone marks a major advancement toward transforming MayaPro Wallet into a fully operational exchange platform, providing holders with a seamless, secure, and integrated financial experience. UK Financial Ltd expects these developments to progress rapidly, aligning with its long-term goal of building a complete digital financial ecosystem for global asset management.
