

Veritas Global Protection Launches Updated EV & Hybrid Protection Plans

Phoenix, Arizona Nov 3, 2025 ([IssueWire.com](https://www.issuewire.com)) - Veritas Global Protection, a [provider of vehicle service contracts](#), today announced the launch of updated EV and hybrid protection plans. These new offerings are designed to cover the unique systems and components of modern vehicles, reflecting the company's commitment to innovation and customer-focused solutions.

Electric and hybrid vehicles are becoming increasingly common, but their repair costs can be significantly higher than traditional vehicles. Components such as battery management systems, charging units, and electric drivetrains require specialized service, often at premium costs.

Veritas' updated EV service contracts and hybrid coverage directly address these challenges. The new plans include protection for high-value systems while maintaining flexibility across a nationwide network of certified repair facilities.

Highlights of the updated EV and hybrid protection options include:

- Coverage for battery assemblies and control modules.

- Protection for charging infrastructure and power electronics.
- Support for hybrid engine components and regenerative braking systems.
- Standard benefits such as 24/7 roadside assistance, towing, and rental car reimbursement.

EV and hybrid adoption continues to rise, with forecasts showing steady growth in the U.S. and abroad. Repair data highlights that while these vehicles often need fewer routine services, the cost of specialized repairs can far exceed expectations. By updating its service contracts, Veritas aims to support consumers in managing those risks effectively.

About Veritas Global Protection
