

10 Year Old Indian Innovator Builds TechForges to Create Practical AI Solutions with Global Partnerships

TechForges focuses on real world problem solving rapid innovation and early validation while partnering with IBM to scale impact

Ghaziabad, Uttar Pradesh Dec 16, 2025 ([Issuewire.com](https://www.issuewire.com)) - TechForges is an emerging Indian technology startup founded by a 10 year old innovator with a vision to build practical and impactful AI driven solutions. The startup focuses on solving real world digital problems through experimentation rapid development and early validation rather than theory alone.

Founded with a builder first mindset TechForges works on AI tools automation concepts and software based solutions designed to be affordable scalable and useful across industries. The company believes in learning by doing and building products that can be tested quickly in real environments.

Despite its early stage TechForges has already gained attention for its unique founder story and execution focused approach. The startup is partnered with IBM which strengthens its commitment to global standards innovation and collaboration within the technology ecosystem.

TechForges aims to grow through strategic partnerships research driven development and hands on innovation. With a young founder at its core the company represents a new wave of Indian entrepreneurship driven by curiosity speed and real world problem solving.
