

# iatroX launches adaptive, board-mapped exam platform to support IMGs preparing for US, Canadian and Australian licensing

**London, United Kingdom Dec 19, 2025** ([IssueWire.com](https://www.IssueWire.com)) - [iatroX](#) today announces the expansion of its adaptive, AI-powered medical exam platform designed specifically to support international medical graduates (IMGs) preparing to enter the [US](#), [Canadian](#), and [Australian](#) healthcare systems.

Each year, tens of thousands of IMGs sit major licensing exams such as the USMLE, MCCQE, and AMC MCQ. These are high-stakes, high-pressure assessments with distinct curricula and competency expectations. iatroX now offers a unified, adaptive Q-bank environment that automatically maps learning to the core requirements of these jurisdictions — enabling IMGs to prepare efficiently, confidently, and with full curriculum alignment.

A single platform for cross-border exam preparation

- **Curriculum-aligned learning** for USMLE Step 2 CK / Step 3, Canadian MCCQE Part I, and Australian AMC MCQ — each structured around the competencies and thematic frameworks used by their respective exam boards.
- **Adaptive question delivery** that analyses user performance, identifies weak areas and tailors revision accordingly, helping IMGs optimise study time while balancing clinical or relocation pressures.
- **Consistency across jurisdictions** — IMGs can switch targets (US → Canada, Canada → Australia) without rebuilding their study workflow; iatroX's engine recalibrates instantly to the new curriculum.

This consolidated approach is designed to reduce the fragmentation IMGs commonly experience when navigating multiple exam ecosystems and unfamiliar regulatory structures.

Designed for global mobility

“IMGs face enormous complexity when moving between healthcare systems,” said [Dr Kola Tytler](#), **Founder and CEO of iatroX**. “Our goal is to remove friction. By adapting to each region’s curriculum and learning expectations, iatroX lets IMGs focus on mastering the material rather than deciphering the system. One platform, one learning engine — wherever your career takes you.”

iatroX’s IMG-focused expansion forms part of its broader mission to build an end-to-end, AI-native learning continuum for clinicians worldwide.
