

LAX Launches on Solana to Deliver High-Speed Infrastructure for Decentralized Payments

The expansion marks a major step toward faster, low-cost, and scalable on-chain payment solutions

Seattle, Washington Dec 15, 2025 ([Issuewire.com](https://www.issuewire.com)) - [LAX](#), the decentralized payments project behind lax.money, has officially launched on the Solana blockchain, bringing high-speed transaction capabilities and low-cost settlement to its growing ecosystem. By integrating with Solana's high-throughput infrastructure, LAX aims to streamline decentralized payments while maintaining efficiency, accessibility, and performance at scale.

The move to Solana enables LAX to leverage near-instant transaction finality and minimal fees, addressing long-standing friction points in on-chain payments. Users and developers can now interact with LAX in an environment optimized for speed and reliability, making everyday crypto transactions more practical for real-world use cases. This launch positions LAX as a flexible payments layer suited for both peer-to-peer transfers and broader decentralized applications.

LAX's Solana deployment reflects its broader vision of building infrastructure that prioritizes simplicity without sacrificing performance. As adoption grows, the project plans to expand integrations, improve liquidity access, and support additional payment-focused tools designed to enhance usability across decentralized finance. The team emphasizes that this launch is a foundational step toward long-term scalability rather than a one-off expansion.

"Launching LAX on Solana represents a practical step toward making decentralized payments faster,

more efficient, and usable at scale,” said [J. King Kasr](#), Chief Scientist at KaJ Labs. “By leveraging Solana’s high-speed infrastructure, LAX is better positioned to support real-world payment activity without sacrificing performance or accessibility.”

With Solana now live, LAX continues to focus on creating a calm, efficient payment experience in an often-volatile market. As decentralized payments evolve, LAX aims to offer users a choice between panic and composure — encouraging participants to sit still, transact smoothly, and stay LAX.

About LAX

LAX is a decentralized payments project built to deliver fast, efficient, and accessible on-chain transactions. Through its platform, [lax.money](#), LAX focuses on simplifying digital payments while supporting scalable blockchain infrastructure designed for real-world adoption.
