

RockBridge Launches Multi-Fiat Account for Easy Crypto On/Off Ramps for First- and Third-Party Deposits & Withdrawals

Dedicated bank accounts in the US & Luxembourg to seemly receive USD & EUR from anyone and send payments to everyone.

Sofia, Sofija grad Dec 17, 2025 ([Issuewire.com](https://www.Issuewire.com)) - [RockBridge](https://www.RockBridge.com) is rolling out an integrated [Multi-Fiat Account](#) designed to make moving between traditional money and digital assets feel like using a modern online bank – whether you’ve never touched crypto before or you’re an active trader.

Instead of juggling multiple banking apps, payment providers and exchanges, users can keep their day-to-day banking services and their trading platform all in one place.

Strong partnerships makes it possible

Through its banking partnerships, RockBridge gives eligible users access to:

- A **U.S. bank account in the user’s name** to receive ACH and Wire transfers
- A **dedicated virtual IBAN in Luxembourg**, one of Europe’s most established banking

jurisdictions, to receive SEPA transfers

Unlike many crypto platforms that only accept deposits from the account holder's own bank, the RockBridge Multi-Fiat Account can receive transfers **from third parties** – from individuals to institutions – subject to standard compliance checks. That makes it possible, for example, to be paid by a client or family member and have the funds arrive directly into your RockBridge account.

If you already used other crypto exchanges, you may be familiar to the requirement of adding a Transfer Tag/Reference/Memo when doing a deposit from your bank account to the exchange. If you mistype this text or forget to add it, you may lose your deposit or face long processing delays. RockBridge Multi-Fiat Account solved this issue by giving its users dedicated accounts rather than pooled ones, like the other platforms do, that require such "Tags" in order to locate the deposit's destination account.

From bank transfer to USDC in one hop

All incoming deposits are converted into **USDC**, a U.S. dollar stablecoin that can then be:

- Traded against 120+ other digital assets on RockBridge
- Sent worldwide to any supported crypto wallet with typically low network fees

The aim is to let users participate in the growing stablecoin-based economy without needing to understand every technical detail in the background.

Paying out: from USDC to real-world expenses

When it is time to spend hard-earned assets in the traditional economy, users can:

- Create a recipient with the bank and personal details of the person or institution
- Choose the destination currency (**EUR or USD**)
- Select how much USDC to send
- Confirm the transfer

Depending on the payment rails, many transfers arrive **within the same hour**, making the Multi-Fiat Account suitable for everyday payments as well as larger moves.

Built for real-world ticket sizes

RockBridge positions the Multi-Fiat Account as a tool not only for small payments, but also for **large real-world transactions** such as:

- Funding a real estate purchase
- Paying for a car

- Moving treasury between entities

RockBridge states that it does not impose a fixed upper limit on transaction size, this avoids the typical “withdraw to your own bank, then send again to the final recipient” detour that many crypto users face on other platforms.

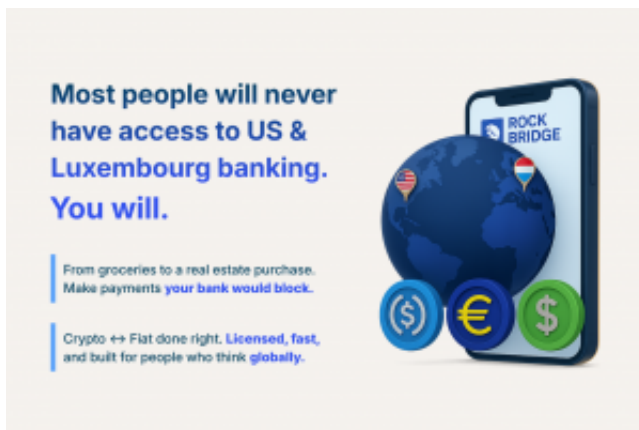

Fully integrated with trading

The fiat layer is not a separate product – it is fully integrated into the wider RockBridge environment:

- Users can keep part of their balance in USDC
- Rotate between fiat and crypto as market conditions change
- Use the same interface for balances, crypto trading and fiat transfers

At any time, instead of withdrawing USDC into EUR or USD, users can trade it across more than 120 cryptocurrencies directly on [RockBridge](https://rockbridge.me). Leveraging its easy-to-use advanced trading tools and market analysis tools. Further details about the Multi-Fiat Account are available on the **Fiat Account** page at <https://rockbridge.me/fiat>.

As always, RockBridge reminds users that crypto markets are volatile, that past performance is no guarantee of future results, and that the platform does not provide investment advice. Trading and investing in digital assets involves significant risk, including the possible loss of capital.

Most people will never have access to US & Luxembourg banking. You will.

From groceries to a real estate purchase. Make payments your bank would block.

Crypto ↔ Fiat done right. Licensed, fast, and built for people who think globally.

The graphic features a smartphone displaying the RockBridge logo, a globe with location pins, and three coins representing the Dollar (\$), Euro (€), and Dollar (\$).
