Bluecoin IoT Brings AI-Ready Facility Intelligence to FWM India Summit 2026

Bluecoin IoT presents Apptimus at 10th Annual FWM India Summit, demonstrating how unified facility intelligence prepares buildings for AI-driven operations.

Pune, Maharashtra Jan 27, 2026 (Issuewire.com**)** - As organizations prepare their facilities for AI-driven operations, the ability to unify building data into a single intelligent layer has become essential. Bluecoin IoT will demonstrate this approach at the 10th Annual Facility & Workplace Management India Summit 2026.

The summit, organized by Inventicon, brings together facility management leaders from organizations across financial services, manufacturing, technology, and healthcare.

Unified Intelligence Across Building Operations

The Apptimus platform connects capabilities spanning space, services, operations, and energy into one intelligent layer. When occupancy data from desk booking connects to climate control, rooms reach comfortable temperatures before people arrive. When service requests flow through a single system, teams always know what needs attention and who is handling it.

"When building data connects, decisions that used to require manual analysis start happening automatically," said Sandeep Kandalwar, Co-founder and CEO of Bluecoin IoT. "That's the shift we're seeing across our deployments."

A mobile app gives employees direct access to workplace services, while a digital twin visualization shows facility teams real-time building status.

Enterprise Adoption

Bluecoin serves enterprises across corporate offices, data centers, manufacturing, healthcare, and education. The company has recently expanded its presence to the United Kingdom and Singapore, building on its established operations in India and the United States.

"Integration with existing systems is a key consideration for enterprise buyers," noted Kushal Chokhani, Co-founder and CTO of Bluecoin IoT. "Apptimus works as a digital layer alongside existing building management systems and connects hardware from multiple vendors. Your core infrastructure stays in place."

Summit Details

The 10th Annual Facility & Workplace Management India Summit brings together facility management professionals to discuss operational practices, technology adoption, and sustainability.

Attendees interested in seeing how Apptimus brings building systems together can visit the company's booth or [schedule a consultation](#).

About Bluecoin IoT

Bluecoin IoT is a [facility intelligence company](#) headquartered in Pune, India. Founded in 2018, the company develops Apptimus, a platform that unifies building systems into a single intelligent layer. Bluecoin is ISO 27001:2022 and SOC 2 certified, serving organizations across corporate offices, real estate, data centers, manufacturing, healthcare, and education in India, the United States, the United Kingdom, and Singapore.
