

CarzRent.com Announces Upcoming Cryptocurrency Payments for Car Rentals

CarzRent.com has announced plans to introduce cryptocurrency payments for car rentals, expanding its payment options for international travelers.

Tenerife, Spain Jan 27, 2026 ([issuewire.com](https://www.issuewire.com)) - CarzRent.com, a car rental platform operating across Tenerife and other key destinations in the Canary Islands, has announced plans to introduce cryptocurrency payments as part of its booking process in the near future.

The upcoming feature will allow customers to pay for car rentals using selected digital currencies, offering an alternative to traditional payment methods such as credit and debit cards. According to the company, the move is aimed at meeting growing demand from international travelers who prefer flexible, borderless payment solutions.

CarzRent.com works with a network of carefully selected local rental companies, with a focus on transparency, vehicle quality, and clear pricing. The platform offers a wide range of vehicles, from economy models to sports and convertible cars, with pick-up options available at Tenerife South Airport, Costa Adeje, and hotel locations.

Company representatives stated that cryptocurrency payments will initially be offered as an additional option rather than a replacement for existing payment methods. The rollout is expected to be gradual,

ensuring compliance with applicable regulations and maintaining secure transaction standards.

The decision reflects a broader trend within the travel industry, where companies are increasingly adopting digital payment technologies to accommodate global customers, digital nomads, and long-stay visitors. CarzRent.com notes that a significant share of its customers come from international markets, many of whom are already familiar with and actively use cryptocurrencies.

Further details regarding supported cryptocurrencies and launch dates are expected to be released once testing has been completed. Customers will be informed through the company's official website and communication channels.
