

# Decrypt Compliance Expands SOC 2 Audit Services for SaaS and Cloud-Based Organizations

Licensed CPA firm supports SOC 2 Type I and Type II audits aligned with AICPA Trust Services Criteria

**San Jose, California Jan 19, 2026 ([IssueWire.com](https://www.issuewire.com))** - Decrypt Compliance, a licensed cybersecurity audit and compliance firm, has expanded its SOC 2 audit and attestation services to support growing demand from SaaS companies, cloud service providers, and technology-driven organizations navigating customer security and compliance requirements.

As SOC 2 continues to be a standard requirement in vendor risk assessments and enterprise procurement processes, organizations increasingly seek qualified service providers capable of delivering accurate, independent audits aligned with American Institute of Certified Public Accountants (AICPA) standards. Decrypt Compliance provides SOC 2 audit services as a licensed CPA firm, issuing formal attestation reports rather than advisory-only assessments.

## SOC 2 Audit Services Aligned With AICPA Standards

SOC 2 is a compliance framework developed by the AICPA to evaluate how service organizations manage customer data using the Trust Services Criteria. These criteria include Security, Availability, Processing Integrity, Confidentiality, and Privacy.

Decrypt Compliance conducts SOC 2 Type I and Type II audits, supporting organizations at different stages of compliance maturity. Type I audits assess control design at a specific point in time, whereas Type II audits evaluate operational effectiveness over a defined monitoring period, typically ranging from six to twelve months.

The firm's SOC audit services are structured to align audit scope with business operations, customer requirements, and system complexity, helping organizations avoid misalignment that often leads to audit delays or increased costs.

### Supporting SOC 2 Compliance Planning and Cost Transparency

Decrypt Compliance emphasizes transparency around SOC 2 audit cost and compliance planning. Audit scope, selected Trust Services Criteria, and readiness levels all influence overall SOC 2 compliance cost. By clearly defining these factors early, organizations can better manage timelines and expectations.

The firm works with clients to establish audit readiness, identify control gaps, and document evidence in line with SOC 2 audit checklist requirements. This approach helps reduce rework and supports smoother audit execution.

### SOC 2 for SaaS and Cloud-Based Organizations

SOC 2 audits are commonly requested of SaaS providers, data processors, and cloud-based platforms handling sensitive customer information. Decrypt Compliance supports organizations operating in regulated and enterprise-focused environments where SOC 2 reports are required for onboarding, renewals, or security reviews.

In addition to SOC 2, the firm supports organizations pursuing ISO-based frameworks, enabling alignment between SOC 2 and ISO certifications where applicable.
