

HashSTACS.HK Named to KPMG China's 2025 FinTech 50 List

The KPMG China FinTech 50 program evaluates companies based on technological innovation, regulatory and governance capabilities, business model sustainability, and overall industry impact.

Afono, Eastern Jan 10, 2026 ([IssueWire.com](https://www.issuewire.com)) - HashSTACS.HK has been named to **KPMG China's 2025 FinTech 50**, recognizing the company as one of the leading financial technology firms contributing to the development of compliant digital financial infrastructure and real-world asset (RWA) enablement.

The **KPMG China FinTech 50** program evaluates companies based on technological innovation, regulatory and governance capabilities, business model sustainability, and overall industry impact. The annual list aims to identify institutions with long-term strategic value and the capacity to support the evolution of the financial system.

HashSTACS.HK focuses on addressing a structural gap in the RWA market: the disconnect between compliant asset issuance and secondary market liquidity. While many RWA initiatives concentrate on primary issuance or isolated trading scenarios, HashSTACS.HK positions itself as an infrastructure provider supporting the **full lifecycle of real-world assets**, from compliant structuring and issuance to organized secondary market circulation.

Unlike many RWA initiatives that focus primarily on primary issuance or isolated trading use cases, HashSTACS.HK is strategically positioned to build end-to-end infrastructure that connects compliant asset origination with secondary market liquidity.

Industry observers view HashSTACS.HK's inclusion in the 2025 FinTech 50 as recognition of its progress in advancing an **integrated model that combines compliant primary issuance with secondary market liquidity organization**.

Looking ahead, HashSTACS.HK stated that it will continue to prioritize regulatory alignment, infrastructure-first development, and coordinated primary-secondary market design, supporting the transition of real-world assets from early-stage experimentation toward sustainable financial adoption.
