

Leikexing Electric: Global Leading Surge Protective Device Manufacturer – Safeguarding the Interconnected World of 2026

Manufacturer of AC Surge Protection Devices

Pluggable DIN-rail AC SPD

We are a reliable surge protection device manufacturer in China, dedicated to producing top-quality Surge Protective Device (SPDs). With a deep understanding of industry standards and regulations, Leikexing produces millions of surge protection devices annually. Our team is committed to delivering Surge Protective Device (SPDs) that combine exceptional quality with a customer-centric approach, ensuring our products are perfectly aligned with market demands.

Wenzhou, Zhejiang Jan 21, 2026 ([Issuewire.com](https://www.issuewire.com)) - In the pulse of 2026, where the "Smart City" is a lived reality and industrial automation has reached its zenith, the stability of power systems is the silent bedrock of global progress. As digitalization accelerates and the global reliance on sensitive electronics intensifies, the threat posed by transient overvoltages—whether from lightning strikes or utility switching—has never been more acute. Emerging at the pinnacle of this high-stakes industry is **Leikexing Electric Co., Ltd.**, a company that has solidified its reputation as a **[Global Leading Surge Protective Device Manufacturer](#)**.

Headquartered in China's premier manufacturing hub, Leikexing is an integrated high-tech enterprise that bridges the gap between sophisticated R&D and world-class electrical safety solutions. By adhering to a philosophy of "pursuing excellence and striving to exceed," the company has become a pivotal force in the global lightning protection landscape, ensuring that the infrastructure of the future remains resilient, safe, and uninterrupted.

The 2026 [Surge Protection](#) Landscape: A Market in Transformation

As we move through 2026, the global Surge Protective Device (SPD) market is undergoing a period of

unprecedented expansion. Driven by a compound annual growth rate (CAGR) exceeding 6.8%. This surge is not merely a matter of volume; it is a fundamental shift in technical requirements.

Today's power systems are more decentralized and electrified than ever before. The rapid rollout of **5G-Advanced networks**, the proliferation of **Electric Vehicle (EV) charging hubs**, and the integration of **distributed renewable energy** have created a new set of vulnerabilities. Modern electronic components are smaller, faster, and significantly more sensitive to voltage spikes. In this environment, a standard surge protector is no longer enough. The industry now demands "smart" SPDs that are compliant with the latest international benchmarks, such as **IEC 61643-11** and the newly updated **IEC 61643-31**.

Core Strengths: The [Leikexing](#) Advantage

Leikexing Electric's ascent to becoming a **Global Leading Surge Protective Device Manufacturer** is built upon a foundation of engineering rigor and customer-centric innovation. The company differentiates itself through several key strategic pillars:

1. Technical Compliance and Standardization

Leikexing does not just follow standards; it masters them. The company's entire product line is engineered to meet and exceed rigorous international and national technical standards, including:

GB/T 18802.11 & GB/T 18802.31: The gold standards for low-voltage surge protection in China.

IEC 61643-11 & IEC 61643-31: International Electrotechnical Commission standards ensuring global interoperability and safety for AC and Photovoltaic (PV) systems.

2. Advanced Manufacturing and Design

The company boasts some of the most advanced technological equipment in China. Their manufacturing processes are characterized by "Refined Craftsmanship," where every component—from the metal oxide varistors (MOVs) to the thermal disconnectors—undergoes stringent testing. Their team of professional designers is dedicated to the evolution of both high and low-voltage electrical products, ensuring that Leikexing stays ahead of the rapid hardware cycles of the electronics industry.

3. Efficient Development and Competitive Pricing

In the fast-paced market of 2026, agility is as important as accuracy. Leikexing has optimized its development cycles, allowing for the rapid prototyping and mass production of custom SPD solutions. By integrating its supply chain and manufacturing vertically, Leikexing offers premium-grade protection at prices that remain highly competitive on the global stage.

Product Application Scenarios: Protection Across Every Frontier

Leikexing's surge protection solutions are deployed in environments where failure is not an option.

Smart Infrastructure and Commercial Buildings

In the modern skyscrapers of 2026, integrated building management systems (IBMS) control everything from HVAC to elevators. A single surge can paralyze a building's operations. Leikexing provides multi-

level protection strategies, beginning with **Type 1 SPDs** at the main service entrance to handle high-energy direct lightning strikes, followed by **Type 2 and Type 3 units** for downstream distribution boards and sensitive office equipment.

Renewable Energy and Photovoltaic (PV) Systems

The global energy transition has placed solar power at the forefront. However, PV arrays are frequently installed in open, elevated areas highly prone to lightning. Leikexing's specialized **DC Surge Protectors (IEC 61643-31 compliant)** are designed specifically to handle the unique electrical characteristics of solar circuits, protecting inverters and battery storage systems from catastrophic damage.

Industrial Automation and IoT

Factories in 2026 are ecosystems of interconnected sensors and programmable logic controllers (PLCs). Leikexing's signal and data-line surge protectors ensure that "Industrial IoT" remains online, shielding sensitive communication ports from the electromagnetic interference (EMI) and transients generated by heavy industrial machinery.

Global Impact: Customer Case Studies and Collaboration

Leikexing's commitment to excellence is best reflected in its successful partnerships across various sectors.

Case Study: Southeast Asian Smart Grid Initiative A regional utility provider faced frequent equipment failures due to the high lightning activity of the tropical climate. Leikexing implemented a customized, remote-monitoring SPD solution that allowed the utility to track the health of their surge protectors in real-time. This proactive approach reduced maintenance costs by 30% and significantly improved grid reliability.

Case Study: European Data Center Expansion For a leading cloud service provider, Leikexing designed a high-capacity surge protection system for their latest edge computing facility. By providing SPDs with ultra-low residual voltage levels, Leikexing ensured that even the most delicate high-speed servers remained protected during a severe local thunderstorm.

The Future of Lightning Protection: Innovation and Excellence

Looking toward the end of the decade, the industry is moving toward **"Smart Surge Protection"**—devices that can communicate their status via IoT protocols to predictive maintenance platforms. Leikexing is already at the forefront of this trend, integrating sensors that detect leakage current and varistor degradation before a failure occurs.

As a comprehensive enterprise, Leikexing Electric continues to prioritize product quality and corporate image, ensuring that they don't just sell a product, but a promise of safety. They warmly welcome global partners to visit for guidance and cooperation, eager to build a future where power is not only smart but unfailingly safe.

Conclusion

In an era of rapid technological flux, **Leikexing Electric Co., Ltd.** remains a steadfast guardian of the

world's electrical systems. Through continuous innovation, strict adherence to international standards, and a tireless commitment to customer satisfaction, they have earned their place as a **Global Leading Surge Protective Device Manufacturer**. Whether it is the energy grid of a nation or the smart devices in a home, Leikexing provides the "invisible shield" that makes modern life possible.
