

## Momentum Controls Software and Services Appoints Mohsin Zaidi as Co-Founder and Chief Technology Officer

**Woodbridge, New Jersey Jan 18, 2026 ([Issuewire.com](http://Issuewire.com))** - Momentum Controls Software and Services ([www.momentumsoftserv.com](http://www.momentumsoftserv.com)), a niche global technology firm specializing in communication technologies and digital transformation, today announced the appointment of Mohsin Zaidi as Co-Founder and Chief Technology Officer (CTO). Based in North Carolina, USA, Zaidi officially joins the

organization after consulting with the company since April 2023.

In his role as CTO, Zaidi will lead the development and strategic direction of Momentum's Applications and AI-driven solutions and services, strengthening the company's capabilities at the intersection of connected technologies and intelligent software.

Zaidi brings more than 20 years of experience across software architecture, systems engineering, telecommunications, IoT, and blockchain. His career spans architecting high-performance networking systems, leading scalable telecommunications microservices, developing IoT platforms, and building decentralized data protocols, open-source tooling, and distributed infrastructure for Web3 ecosystems. He holds over a dozen patents in these domains and has also co-founded ventures in EdTech and Telehealth, building platforms that have served across multiple continents.

"Making software a first-class citizen is a massive multiplier in industries where technology has historically played a supporting role," said Zaidi.

Sharing his perspective on artificial intelligence, Zaidi added, "AI is a power tool—nothing more, nothing less. Organizations that pursue AI as a magic solution, without understanding its capabilities and limitations or implementing it with oversight, risk failure. When applied pragmatically, however, AI becomes a powerful force multiplier, enabling systems that learn from real-world usage, adapt to changing conditions, and evolve over time".

"I strongly believe in an AI-first approach—done right. That means empowering humans to focus on decisions, design, and direction. Large Language Models are powerful, but they lack true understanding, making human oversight essential. This is how AI augments human capability and delivers reliable, deterministic systems that organizations fully own and control. With Momentum's deep expertise in connected technologies combined with our Applications and AI offerings, we aim to bring this potential to life for our clients."

Commenting on the appointment, Nihit Bansal, CEO of MomentumSoftServ, said, "We are very excited to welcome Mohsin to Team Momentum. The world is at a pivotal transition—from the Digital era to the AI era—and this is the perfect time to have a leader of Mohsin's caliber drive our strategic growth in Applications and AI. Momentum is not a generic software development firm; we are a niche, premier Networks, Cybersecurity, and IoT company that also builds great software. That deep domain expertise is our competitive advantage, and when software becomes an equal partner alongside it, the impact will compound significantly."
