

Ninja Van Strengthens Warehouse Performance Through AC2 Wave WMS Deployment

Ninja Van reports measurable efficiency improvements following the implementation of AC2 Wave WMS across its high-volume warehouse operations.

Gardenview, Gauteng Jan 15, 2026 ([Issuewire.com](https://www.issuewire.com)) - As warehouse volumes continue to grow across Southeast Asia, logistics providers are increasingly adopting digital platforms to maintain operational speed and accuracy. Ninja Van has taken a key step in this direction through the deployment of AC2 Wave WMS, a cloud-native warehouse management system designed for high-volume fulfilment environments.

Ninja Van processes millions of parcels every month across both B2B and B2C delivery models. To support this operational complexity, the company implemented AC2 Wave WMS to improve inventory visibility, standardize warehouse workflows, and enhance consistency across picking and packing activities.

Following the system's go-live, Ninja Van recorded notable improvements in daily warehouse performance. Picking speed increased by approximately 30 percent, while overall warehouse

throughput also improved by around 30 percent. These gains allowed operations to conclude earlier in the day, reducing overtime requirements and improving workforce efficiency.

“With AC2 Wave WMS in place, our warehouse operations have become more predictable and efficient,” said Lee Tzi Zhao, Director of Supply Chain Management and Partnerships at Ninja Van. “The improvements in speed and accuracy have had a positive impact on how our teams operate each day.”

AC2 Wave WMS is designed to support enterprise-scale warehouse operations while remaining flexible for fast-growing fulfilment networks. The platform delivers real-time inventory insights and enables warehouse teams to proactively manage changing order volumes and operational demands.

“Reliable warehouse execution is critical in today’s logistics environment,” said Aw Yang Uei, Founder and Managing Partner of AC2. “We are pleased to see how Ninja Van is using AC2 Wave WMS to support consistent performance as operations continue to scale.”

A detailed case study outlining Ninja Van’s warehouse transformation using AC2 Wave WMS is available at <https://www.ac2wave.com/post/ninja-van-with-ac2-wave-wms-redefining-the-warehouse-experience-for-b2b-and-b2c>
