

Rishab Industries Partners with Reliamotive Labs to Advance High-Frequency Magnetics in India

Collaboration integrates advanced simulation, design, and manufacturing capabilities

Pune, Maharashtra Jan 26, 2026 ([Issuewire.com](https://www.issuewire.com)) - [Rishab Industries](#) today announced a strategic partnership with Reliamotive Labs aimed at strengthening India's capabilities in high-frequency magnetics and power electronics. The collaboration brings together advanced design and simulation expertise with established manufacturing and validation capabilities.

Under the partnership, Reliamotive Labs' strengths in high-frequency magnetics design, modelling, and simulation will be combined with Rishab Industries' experience in industrial manufacturing and quality-driven execution. The collaboration is focused on accelerating the development of [magnetic components](#) used in electric vehicles, renewable energy systems, and next-generation power conversion equipment.

A key element of the partnership is the integration of finite element simulation tools with real-world manufacturing and testing workflows. By closely linking simulation, design iteration, prototyping, and production validation, the collaboration aims to reduce development timelines while improving

consistency in performance, reliability, and manufacturability.

In addition to technology development, the partnership places emphasis on engineering capability building. Both organisations will work together to expose engineers to applied industrial workflows, helping develop practical skills aligned with the needs of India's growing electrification and power electronics sectors.

"This partnership reflects our long-term intent to build globally competitive magnetic solutions from India," said a senior engineering representative at Rishab Industries. "By combining advanced simulation-led design with disciplined manufacturing practices, we are strengthening the foundation for high-frequency magnetics developed and produced at scale."

With this collaboration, Rishab Industries continues to expand its role within India's evolving power electronics landscape while contributing to the development of a more integrated and globally competitive high-frequency magnetics ecosystem.

About Rishab Industries

Rishab Industries designs and manufactures magnetic components, [transformers](#), [PDUs](#), [RPPs](#), and power distribution solutions for industrial and data centre applications, with a focus on dependable performance, engineering consistency, and manufacturability. Its systems are built to operate reliably in critical environments. Unseen yet Indispensable.

About Reliamotive Labs

Reliamotive Labs specialises in advanced power electronics design, simulation, and development, with particular expertise in high-frequency magnetics and electrification technologies.
