

Silicon Valley Investclub Interviews Point Wild to Explore the Future of Cybersecurity M&A

In an exclusive interview, Point Wild's President & COO discusses how the Lat61 platform powers M&A integration and unlocks value across consumer, enterprise, and legal markets

San Francisco, California Jan 26, 2026 ([Issuewire.com](https://www.Issuewire.com)) - [Silicon Valley Investclub](#), an official member of Forbes Finance Council that connects global investors with high-potential venture capital and private equity deals, recently conducted an exclusive interview with Neill Feather, President and Chief Operating Officer of [Point Wild](#), a global cybersecurity holding company with an enterprise value

of \$1.7 billion. The wide-ranging conversation explored Point Wild's unique approach to building, acquiring, and modernizing digital security solutions across multiple market segments.

Point Wild was formed in December 2024 through the merger of Pango Group and Total Security. The combined company generates approximately \$600 million in annual revenue and protects more than 25 million users worldwide through its portfolio of cybersecurity brands, including Hotspot Shield, Total AV, Ultra AV, Betternet, CyEx, and Simpluris.

Strategy and Technology

During the interview, Neill Feather outlined how Point Wild translates its mission into tangible business outcomes — building and acquiring companies with specific cybersecurity expertise, then integrating them through the company's proprietary Lat61 AI platform. *"Our goal is to focus on solving real-world security problems, looking at places where traditional security practices might fail,"* said Feather. *"Lat61 pulls information from over 25 million endpoints into a common backend, giving all of our products the ability to evolve and react to the latest threats. This AI capability enables us to integrate new businesses much quicker than we could have done otherwise."*

A Multi-Segment Approach

Unlike competitors focused on a single buyer or use case, Point Wild spans consumer, enterprise, and legal markets — a deliberate strategy driven by the nature of cyber threats themselves. *"We don't see cybercriminals respecting traditional boundaries of consumer, enterprise, or legal,"* Feather noted. *"By combining those, we're able to offer one solution end-to-end instead of a fragmented point solution."* On unlocking value in legacy security assets, he added: *"It's about putting the right contextualization around data and bringing AI to bear in the right use cases — unlocking growth through automation, rather than technology for the sake of it."*

About Point Wild

[Point Wild](#) is a global leader in cybersecurity, protecting individuals and businesses from the ever-evolving threats of the digital world. At the core of our protection is Lat61, a modular, API-enabled platform that unifies our specialized security solutions—making it easier than ever to deploy powerful protection at scale. Powered by more than 20 years of expertise, our industry-leading brands deliver best-in-class security—from device protection and online privacy to identity theft prevention—to more than 25 million users worldwide.
