

# Superior Systems Reminds Colorado Springs Homeowners to Schedule Spring Sprinkler System Start-Ups

Family-owned irrigation specialist with 35+ years of experience prepares to activate residential sprinkler systems across southern Colorado.

# Superior SYSTEMS

**Colorado Springs, Colorado Jan 26, 2026** ([IssueWire.com](http://IssueWire.com)) - Superior Systems, a trusted sprinkler and landscaping company serving the Colorado Springs region, reminds homeowners to begin scheduling spring sprinkler system start-ups and inspections as winter continues. With over 35 years of experience protecting and maintaining irrigation systems, the family-owned business emphasizes that early planning ensures systems are ready to support healthy landscapes when warmer weather arrives.

Founded over three decades ago by owner Johnny Smothers, Superior Systems has established itself as a reliable partner for homeowners seeking professional sprinkler maintenance, installation, and repair services across Colorado Springs, Cimarron Hills, Fountain, and Pueblo West.

"While snow still covers the ground, it's the perfect time to start thinking about spring," said Johnny Smothers, CEO and Owner of Superior Systems. "Scheduling your sprinkler system start-up now ensures we can activate and inspect your system as soon as conditions allow. Early planning helps homeowners avoid the spring rush and ensures their irrigation is ready when their landscape needs it most."

Spring sprinkler system start-ups represent essential seasonal maintenance that protects irrigation investments and ensures healthy landscapes throughout the growing season. Professional activation includes checking for winter damage, testing all zones and components, adjusting spray patterns and timers, identifying needed repairs, and ensuring systems operate efficiently.

Superior Systems specializes in sprinkler installation, maintenance, and seasonal services, with additional capabilities in landscaping and hardscaping projects. The company's 35 years of experience have created deep expertise in irrigation systems that perform reliably in Colorado's unique climate conditions.

What clients often describe as a "generational business," Superior Systems has built lasting relationships that span from grandparents to grandchildren. This multi-generational client base reflects the trust and reliability the company has established over more than three decades of service in the Colorado Springs area.

"Spring start-ups are critical for identifying issues before they become expensive problems," Smothers explained. "Winter can damage sprinkler components through freezing, ground shifts, or other factors.

Our experienced technicians thoroughly inspect every part of your system during activation, catching small issues before they waste water or damage your landscape."

Superior Systems maintains an impressive 98 percent retention rate among its clients, with homeowners returning year after year for seasonal maintenance and system care. This loyalty reflects both the quality of the company's work and the relationships it has built within the Colorado Springs community.

Colorado's unpredictable spring weather requires careful timing for sprinkler system activation. Superior Systems' decades of experience enable the team to recommend optimal timing based on current conditions, forecast patterns, and individual property needs, ensuring systems are activated safely without risk of freeze damage.

The company's family-owned approach emphasizes personalized service and technical expertise. Superior Systems' experienced technicians understand the challenges posed by Colorado's dramatic temperature swings, unpredictable weather patterns, and unique soil conditions throughout southern Colorado.

Early scheduling for spring start-ups provides homeowners with flexible appointment options before the busy spring season arrives. Superior Systems works efficiently to activate systems throughout the region, but early planning ensures preferred timing and avoids delays that can leave landscapes stressed during critical spring growth periods.

Professional spring start-ups also provide opportunities to discuss irrigation improvements, system upgrades, or landscape changes that homeowners have been considering. Superior Systems helps clients optimize their irrigation systems for efficiency, water conservation, and landscape health.

Smothers emphasizes that proper spring activation sets the foundation for successful growing seasons. Systems that receive professional start-up service operate more reliably, use water more efficiently, and support healthier landscapes throughout Colorado's intense summer conditions.

"Our clients trust us because we've been there for them season after season, often for decades," Smothers said. "We've activated systems for grandmothers and now we're serving their grandchildren. That kind of loyalty comes from consistent, quality service and genuine care for our community."

The company serves residential properties throughout the Colorado Springs metropolitan area, bringing the same level of expertise and attention to every system, regardless of size or complexity. Superior Systems' generational approach ensures that the irrigation knowledge accumulated over 35 years benefits every client.
