San Jose, California Jan 1, 2026 ([Issuewire.com](https://www.issuewire.com)) - The intelligent ERP Assistant marks a significant milestone in the adoption of the generative AI in the ERP, adding conversational and context-aware intelligence directly into the core businesses and improvement in the workflows. Perhaps, it builds on Microsoft's industry-leading AI foundation, and Copilot brings natural language understanding and generative intelligence directly into the [Microsoft Business Central development](#) environments.

The ERP assistants with Microsoft Copilot for the business central enable the users for quick interaction with the ERP system through simple text prompts, turning questions into actionable insights, and automated responses.

“[Trango Tech](#)’s intelligent ERP assistant harnesses the power of Copilot’s AI for helping the customers reimagine the way businesses drive actual growth and value. For instant automation of repetitive tasks, and delivering real time insights with predictive recommendations.”

AI-Driven ERP Insights and Productivity

Trango Tech has integration Microsoft Dynamics 365 Business Central for instant Copilot integration where users can:

Ask questions like “show me overdue receivables by the region” and get the answers directly through the AI based NLP models.

With automated routine processes like invoice matching, sales order creation and document summarization with instant reduction in the manual workload and data processing.

It comes with generative contextual narratives and forecasts for the financial and operational planning, driving faster decision-making.

Lastly, the customized AI assistant for industry-specific use cases via Copilot Studio and extending the workflows without heavy coding.

With the instant integration of Microsoft 365 Business Central, businesses are now enhancing the modern AI capabilities for boosting the viabilities of the results. Moreover, you can leverage generative AI to help the organisation extract the meaningful insights from large ERP datasets, turning data into strategic and compiled form rather than a static report that is hard to understand and process.

Empowering Businesses, Developers and Consultants

If we talk about [Dynamics 365 Business Central Implementation](#) then, the seamless integration of Copilot open new areas for delivering value to the clients:

- > App developers can embed into Copilot experiences directly into the Business Central customisation that enhances the user interface and workflows.
- > The consultants can accelerate the implementation with the pre-built AI scenarios that reduces the deployment time and efforts with improvement in the adoption.
- > Lastly, the teams associated with Trango Tech gain an unified approach to an ERP seamless automation and data insights without requiring the advanced coding skills.

Unlock Smarter ERP with Microsoft Copilot for Business Central

Trango Tech is proud to announce the integration with Microsoft Copilot for Business Central, bringing AI-powered intelligence directly into the ERP workflows.

With Copilot, you can easily manage the finances, sales, and operations teams. The core benefits include:

- > Accessing the real-time financial and operational insights through conversational AI.
- > Summarize the large datasets and transactions into easy-to-understand narratives.
- > Improvement of the forecasted data with instant accuracy through AI-powered trend analysis.
- > Reduction in the manual errors by letting the Copilot guide data entry and validation.
- > Accelerating the month-end and year-end closing processes.
- > Enabling faster decision-making with AI-generative recommendations for better analysis.
- > It is enhancing user productivity by embedding the intelligence directly into the daily workflows.
- > Empower non-technical users to work confidently with ERP data

Emerging Trends in ERP and AI

Organisations are now enabling change through [Dynamics 365 consulting services](#) that increase the integration of AI into ERP systems for a modernised operations and competitive edge.

Trango Tech and team has been working on the quick adoption of the ERP that has rapidly accelerated the businesses with recognition of the ability of tools like Copilot to further transform the way users interact with the data. It enables smarter and faster decision making and makes the workers feel easy and relieved from doing the same repetitive work and focus on strategic processing & planning.

Businesses are now reaching out to Trango Tech for instant and seamless Microsoft Business Central 365 integration to make their internal processes easier and quicker. The manual working is being reduced and it's helping businesses with instant automation of the operations.
