

VER Food Solutions Expands Global Presence with Advanced Food Processing Automation Solutions

Jinan, Shandong Jan 28, 2026 ([Issuewire.com](https://www.issuewire.com)) - VER Food Solutions, a manufacturer of food processing machinery, continues to strengthen its presence in the global food processing industry by offering automation-focused solutions designed to support efficiency, hygiene, and product consistency across food production operations.

The company provides end-to-end processing systems covering multiple stages of food production, including preparation, portioning, coating, cooking, and further processing. These systems are used in meat, poultry, seafood, and vegetable processing facilities to support consistent production while aligning with food safety and quality requirements.

VER Food Solutions' portfolio includes equipment developed for value-added food processing applications such as formed products, coated items, cooked foods, and ready-to-process components. The company's automation solutions are designed to reduce manual handling, support yield management, and promote uniform product output in large-scale processing environments.

"Our engineering approach is focused on practical automation that supports operational efficiency and consistent product quality," said the owner of [VER Food Solutions](https://www.verfoodsolutions.com). "We work closely with food

processors to deliver systems that can be integrated into existing production lines or adapted to specific capacity and processing requirements.”

The company’s machinery is manufactured using industrial-grade materials and modern engineering practices, with an emphasis on durability, hygienic design, and ease of maintenance. VER Food Solutions also offers configurable system layouts, allowing processors to implement standardized or customized solutions based on operational needs.

VER Food Solutions continues to work with food manufacturers across international markets, providing processing technology and technical support to help processors scale operations while meeting applicable quality, safety, and performance standards.
