

Wired Solutions Helps Des Moines Homeowners Plan Electrical Upgrades for Spring Projects

Master electrician-founded company offers transparent service with Lifetime Craftsmanship Guarantee for residential electrical improvements across central Iowa.

Des Moines, Iowa Jan 27, 2026 ([Issuewire.com](https://www.issuewire.com)) - Wired Solutions, a trusted residential and commercial electrical contractor serving the Des Moines metropolitan area, announces its focus on helping homeowners plan electrical upgrades and improvements for spring projects. Founded by master electrician Justin Beam, the company emphasizes that winter provides ideal timing for homeowners to assess electrical needs and schedule upgrades that enhance safety, functionality, and modern convenience throughout their properties.

Since founding Wired Solutions in 2022, Beam has built the company on a straightforward vision: create an electrical contractor that actually puts customers first, where expert workmanship isn't optional, and where safety and quality never get compromised. The company serves Des Moines and surrounding communities, including Ankeny, Clive, Johnston, Urbandale, Waukee, and West Des Moines.

"Winter is the perfect time to start thinking about electrical upgrades you've been putting off," said Justin Beam, CEO and Owner of Wired Solutions. "Whether you're planning a spring remodeling project, need to upgrade an outdated panel, or want to add outlets and lighting for better functionality, now is the time to plan. We're here to help homeowners understand their options and schedule work that ensures their electrical systems are ready for whatever spring brings."

Wired Solutions was founded after Beam witnessed a frustrating pattern in the electrical industry: homeowners getting ghosted by electricians who never showed up, dealing with half-finished jobs, or paying for work that wasn't done safely or correctly. He heard stories from families who felt taken advantage of and people who simply wanted someone they could trust with their home's electrical systems.

"I got tired of seeing homeowners get burned by contractors who didn't care," Beam explained. "That's why we built Wired Solutions with a focus on no shortcuts, no ghosting, no surprises on the bill. Just

honest work from people who genuinely care about doing things the right way, every single time."

The company's core values guide every decision and interaction. Integrity means doing what's right even when it costs more time or money, even when no one would know the difference. Quality craftsmanship ensures every project gets completed with precision and care, backed by the company's Lifetime Craftsmanship Guarantee.

Transparency provides clear communication from the first call through final cleanup, with upfront pricing and no surprise charges. Customer focus ensures that friendly, knowledgeable technicians treat homes with genuine respect, explain what they're doing and why, and make sure clients feel comfortable every step of the way.

Spring electrical upgrades often include panel upgrades to handle modern electrical demands and support planned renovations, outlet additions in kitchens, home offices, and living spaces, lighting installations both interior and exterior, smart home technology integration, electric vehicle charging station installation, and comprehensive safety inspections that identify potential issues before they become problems.

Wired Solutions handles comprehensive electrical services, from quick outlet repairs to major panel upgrades and complete electrical system assessments. The company stays ahead of the curve when it comes to technology and safety standards, investing in ongoing training, modern equipment, and the latest techniques.

The company's three years of service to the Des Moines area have built a foundation of trust within the community. Beam emphasizes that exceptional electrical work goes beyond just connecting wires and flipping breakers—it's about building trust, communicating clearly, and treating people's homes the way the team would want their own homes treated.

Winter planning allows homeowners to assess their electrical needs without the pressure of immediate deadlines. Wired Solutions works with clients to develop detailed plans for electrical improvements, establish realistic budgets, and create schedules that align with other home improvement projects planned for spring and summer.

The company's Lifetime Craftsmanship Guarantee demonstrates confidence in the quality and longevity of work performed, providing homeowners with peace of mind that their electrical systems are built to last. This guarantee reflects Wired Solutions' commitment to doing things right the first time.

Beam emphasizes that many homeowners planning spring remodeling projects don't realize the electrical upgrades those renovations require. Kitchen remodels often need additional circuits, bathroom updates require proper GFCI protection, and basement finishing projects need comprehensive electrical planning.

"We're not satisfied until you're confident the work will last," Beam said. "When Des Moines families trust us with their homes, we take that responsibility seriously. Our goal is to ensure every electrical system we work on operates safely, efficiently, and reliably for decades."
