

## A New and Completely Free Full-Website Indexability Checker Tool for SEO Audits - signalindex.net

Signal Index, a no-index checker tool which scans entire websites from root domain, which is a premium functionality, all for free. No sign up required!

**Hubli, Karnataka Feb 23, 2026** ([IssueWire.com](http://www.IssueWire.com)) - A new web-based search engine optimization (SEO) tool called **Signal Index** has been introduced to help website owners and SEO professionals identify unintended “no-index” settings across entire domains at no cost and no sign up requirement.

Signal Index is designed to scan all publicly accessible pages within a domain and report on indexability issues, including no-index directives in HTML meta robots tags, HTTP headers such as X-Robots-Tag, and robots.txt rules.

## **Why This Tool Is Needed?**

Some may think that when Google Search Console already exists, why another tool is even required?

The answer is simple and already felt and known by SEOs. While Google Search Console exist with such core functionality, it is only accessible to verified website owners. External consultants, agencies, or third parties cannot check indexability unless they are given access.

Along with that, reviewing no-index issues often requires a manual, page-by-page process. Signal Index removes these limitations by allowing anyone to scan a domain instantly and view indexability results in one place, above all, without logins, verification, or delays.

## **How the Tool Works?**

When a domain is entered into the Signal Index's input field, the platform instantly starts scanning the website in real time and reviews the indexability of every URL.

The results clearly display page status categories, identify the source of any detected directives, and outline the specific rules applied.

Users can easily filter the data to view indexable pages, pages marked as no-index, or URLs blocked by robots instructions. For a more detailed analysis, the complete audit report can be downloaded in format of CSV for further review.

## **No Cost and No Sign-Up Required**

The tool provides a live results table and exportable CSV reports without requiring user registration or subscription.

Big SEO platforms such as Semrush, Ahrefs, and Site Checker Pro often include comprehensive indexability auditing features only within their higher-tier paid plans. This is exactly where Signal Index stands out.

Signal Index offers similar functionality independently, making it accessible and affordable for independent site owners, digital marketers, and small agencies that may not subscribe to enterprise-level software due to budget limitations.

## **Why Index Checks Are Important**

This type of audit is typically conducted after major website updates, including site migrations, staging deployments, or regular technical SEO health checks.

In these situations, accidental no-index settings often go unnoticed and significantly impact search visibility if they are not quickly identified and resolved.

## **Built to Solve a Real Problem**

"I built Signal Index because I kept running into the same problem. Identifying no-index issues across an entire website required either an expensive tool subscription or a slow, manual process," said the founder of Signal Index. "I wanted to make it simple: enter a URL, click scan, and get a full report. No barriers."

Signal Index is accessible at <https://signalindex.net> and operates without requiring users to create accounts or pay fees.
