

Beyonra Launches as the World's First Revenue and Growth Engineering Technology Company

The company's proprietary 360 Intelligence Report audits businesses across 360+ parameters — finding the invisible problems that have been quietly draining revenue all along.

BEYONRA

Mumbai, Maharashtra Mar 4, 2026 ([IssueWire.com](https://www.IssueWire.com)) - [Beyonra](#), a Revenue and Growth Engineering Technology company based in India, helps businesses fix the structural problems behind inconsistent growth by auditing their complete revenue system and engineering custom solutions based on what the audit finds. The company has announced its official launch alongside the release of its flagship product, the Beyonra 360 Intelligence Report.

Beyonra was founded by a team of software developers and system architects with over eight years of

experience building SaaS platforms, CRM systems, ERP frameworks, and automation solutions for businesses across multiple industries. During that period, the team observed a consistent pattern. Businesses were investing in technology and marketing but growth remained inconsistent. The underlying cause, in most cases, was structural. Marketing, sales, operations, and technology were functioning as separate units with no shared architecture connecting them. Revenue was leaking in the gaps between those functions without any obvious signal that something was wrong.

Beyonra was established to address this structural problem through a methodology the company calls Revenue and Growth Engineering.

The Beyonra 360 Intelligence Report is a diagnostic framework that evaluates a business across more than 360 parameters before any recommendation is made. The audit covers six areas: internal operations and revenue flow, business model health and competitive positioning, country and market-specific context, industry benchmarks for the client's vertical, growth architecture covering acquisition and retention, and a full technology infrastructure assessment.

The report delivers two categories of findings. Problems the business is already aware of, now defined with root cause analysis and business impact estimates. And structural gaps the business had no previous framework to identify, the invisible leaks that have been quietly draining revenue.

"The tool was never the issue," the founding team stated. "The issue was the structure underneath the business that determined whether any tool could work the way it was supposed to."

Based on report findings, Beyonra engineers custom solutions in-house. These include custom CRM systems, ERP platforms, SaaS product development, AI automation workflows, web and mobile applications, and performance marketing systems. All work is delivered by the Beyonra team with no outsourcing at any stage.

Beyonra currently serves clients across India and is expanding to the Gulf region, the United Kingdom, and Southeast Asia.

About Beyonra: Beyonra is a Revenue and Growth Engineering Technology company founded in India. Services include revenue system design, custom SaaS development, CRM and ERP systems, AI automation, web and mobile application development, and performance marketing.
