

CNC Broach Tool LLC Assigned CAGE Code, Expanding Readiness for U.S. Government Contracting

Designation strengthens company's position to support defense and federal manufacturing initiatives.

Laguna Beach, California Feb 27, 2026 ([IssueWire.com](https://www.issuewire.com)) - CNC Broach Tool LLC, a domestic original equipment manufacturer (OEM) of specialized CNC broaching tooling, announced it has been assigned Commercial and Government Entity (CAGE) Code 18VW5 through the U.S. government's System for Award Management (SAM.gov). The designation enables the company to more efficiently engage in federal procurement opportunities and support government and defense-related manufacturing programs.

The CAGE code assignment marks an important milestone for CNC Broach as it continues to position its single-operation broaching technology for use in high-reliability manufacturing environments. The company's tooling enables internal splines and keyways to be machined on standard CNC equipment, reducing the need for dedicated broaching machines while lowering setup time and production complexity.

By shrinking the equipment footprint and enabling faster production cycles, CNC Broach's technology aligns with broader industry priorities around resilient manufacturing and point-of-need production. These capabilities are especially relevant for aerospace, maritime, and defense supply chains where efficiency, flexibility, and domestic sourcing are increasingly critical.

"Receiving our CAGE code is an exciting step that allows us to more directly support government and defense manufacturing initiatives," said John Gardner, President at CNC Broach Tool LLC. "We're proud to offer tooling that helps manufacturers produce critical components faster, with fewer resources, and with the precision these applications demand."

CNC Broach will continue working with machine shops, contractors, and partners to expand adoption of its process innovation and contribute to a stronger, more agile domestic manufacturing base.

About CNC Broach Tool LLC

CNC Broach Tool LLC is a U.S.-based OEM specializing in carbide CNC broaching tools for single-operation cutting of internal splines and keyways. The company's tooling is designed to reduce setup time, eliminate the need for dedicated broaching machinery, and improve throughput for manufacturers serving aerospace, defense, and industrial markets.
