San Jose, California Feb 16, 2026 (IssueWire.com) - Decrypt Compliance, a CPA firm specializing in cybersecurity, privacy, and AI assurance services, today announced the expansion of its SOC 2 and ISO 27001 audit services to support SaaS and technology companies operating across global markets.

The expansion comes in response to increasing enterprise demand for independent verification of security and governance controls. As organizations scale internationally, customers and regulators are requiring structured assurance over data protection, risk management, and operational integrity. Decrypt Compliance has expanded its multi-framework audit capabilities to address these expectations while maintaining efficient audit timelines for growing companies.

The firm provides SOC 2 Type I and Type II examinations, SOC 1 audits focused on internal controls over financial reporting, SOC 3 reports for public-facing trust communication, and ISO 27001 readiness and certification audits. These services are designed to help SaaS providers meet procurement requirements, strengthen vendor risk management positioning, and support global expansion strategies.

Raymond Cheng, CEO & Managing Partner of Decrypt Compliance, stated, “Technology companies are expanding into international markets earlier in their lifecycle. With that growth comes increased scrutiny from enterprise customers. Our expanded services are structured to help organizations demonstrate security maturity while maintaining operational efficiency.”

Decrypt Compliance’s audit delivery model follows a three-phase approach: readiness assessment, implementation support, and independent certification. During readiness, the firm evaluates control design and identifies gaps. The implementation phase focuses on strengthening policies, access controls, monitoring systems, and documentation. The final certification stage involves formal independent testing and issuance of audit reports.

Industry demand for SOC 2 Type II reports has increased significantly in sectors such as fintech, health technology, cloud infrastructure, and enterprise software. At the same time, many companies pursuing international clients are seeking ISO 27001 certification to demonstrate the presence of a structured information security management system.

By expanding its [ISO 27001 audit services](#), Decrypt Compliance aims to provide organizations with an integrated compliance pathway. Rather than approaching frameworks independently, the firm aligns controls across SOC and ISO standards to reduce duplication and streamline audit preparation.

Enterprise procurement teams frequently require SOC reports during vendor onboarding processes. In addition, global regulatory expectations around data protection and cybersecurity have increased the need for standardized assurance mechanisms. The firm reports that companies able to present verified compliance documentation often experience shorter sales cycles and reduced security questionnaire burdens.

Decrypt Compliance is headquartered in San Jose, California, and serves venture-backed startups, mid-market SaaS providers, and established technology enterprises. The firm combines CPA accreditation with cybersecurity governance expertise to deliver independent assurance engagements tailored to technology-driven organizations.

As cross-border data regulations continue to evolve, Decrypt Compliance expects sustained growth in demand for multi-framework audit support. The company states that its expanded service capacity will allow it to support clients across North America, Europe, and Asia-Pacific while maintaining consistent audit methodology and reporting standards.
