

French PropTech Startup Stream.estate Sets Out to Become Europe's Essential Real Estate Data Layer

Paris, France Feb 13, 2026 ([Issuewire.com](https://www.issuewire.com)) - Stream.estate Emerges as Europe's Most Comprehensive Real Estate Data API, Aggregating thousands of sources in Real Time

Stream.estate, the enterprise API platform developed by DLL, today announced its position as the leading real estate data infrastructure provider in France, delivering real-time access to thousands of property listing sources.

As PropTech companies across Europe increasingly rely on accurate, up-to-date property data to power their platforms, Stream.estate offers a turnkey alternative to costly and unreliable in-house data scraping. The API enables real estate professionals, fintech platforms, neo-brokers, and financial institutions to integrate comprehensive French property market data directly into their products — at a fraction of the cost of building it themselves.

"Our mission is to make real estate data as accessible and reliable as weather data," said Stan, CEO and co-founder of DLL. "PropTech companies are spending upwards of €200,000 per year maintaining fragile scraping infrastructure that covers only a handful of sources. Stream.estate replaces all of that with a single, enterprise-grade API with 99.9% uptime."

Stream.estate's key capabilities include real-time data aggregation from the broadest network of French real estate sources, intelligent deduplication across platforms, and a developer-friendly API designed for rapid integration. The platform serves clients ranging from property search startups to major banking institutions.

With an ambitious product roadmap that includes webhook-based real-time notifications, 12-month historical data access, and AI-powered property valuation models, Stream.estate is positioning itself as the essential data layer for the European real estate industry.

The company is currently onboarding enterprise clients with 30-day proof-of-concept trials. Interested organizations can learn more at <https://stream.estate>
