

# Hixec Announces Expansion of Its Online Cybersecurity Platform With New Security Tools and Mapping Suite

Hixec expands its cybersecurity platform with new tools and mapping features to support international users.

**Deming, New Mexico Feb 18, 2026** ([IssueWire.com](http://IssueWire.com)) - [Hixec](#), an online [cybersecurity platform](#), announced the expansion of its digital infrastructure with the release of new tools and a dedicated mapping suite designed to support users across multiple regions.

The update introduces several new platform sections, including tools, security mapping, and service suites. These additions are part of the company's ongoing effort to consolidate its cybersecurity resources into a single, accessible online environment.

Hixec operates as a fully online platform serving international users, with its primary website available in Spanish. The company focuses on providing cybersecurity-related resources, utilities, and information through a modular platform structure.

According to the company, the recent expansion is intended to improve accessibility and organization across its services, allowing users to navigate between different platform components more efficiently.

"The goal of this update is to simplify how users access different parts of the platform while maintaining a consistent structure across all services," said a representative of Hixec.

The platform now includes dedicated subdomains for specific functions, such as security tools, mapping

features, and service suites. Each section is designed to operate independently while remaining connected to the main Hixec domain.

This structural expansion reflects the company's ongoing development of its online cybersecurity environment and its focus on maintaining a scalable, modular architecture.

Hixec states that it will continue to develop new tools and platform features throughout 2026 as part of its long-term roadmap.

More information about the platform is available at:
