

iWebFusion New EPYC™ VPS Specials-Massive Core Counts-Enterprise Performance Unprecedented Price

Los Angeles, California Feb 4, 2026 (IssueWire.com) - iWebFusion.Net (iWF), a brand of H4Y Technologies LLC, today announced the launch of its new AMD EPYC™ VPS Hosting Specials, featuring next-generation EPYC 9-series processors designed to deliver extreme performance, scalability, and value for businesses, developers, and infrastructure providers.

Built on AMD EPYC 9754 CPUs and deployed on brand-new hypervisor nodes, the new VPS lineup offers ultra-high core counts, fast NVMe storage, and premium 10Gbps (up to 40Gbps) connectivity—without artificial usage limits. The plans are available immediately and include special promotional pricing for a limited time. “This is a major evolution of our VPS and cloud compute platform,” said iWebFusion. “With EPYC 9-series CPUs, customers can scale smarter, consolidate workloads, and unlock enterprise-grade performance at prices that were simply not possible before.”

Enterprise Infrastructure, Owned and Operated For over 25 years, H4Y Technologies LLC and iWebFusion has powered mission-critical infrastructure for businesses worldwide. Unlike resellers, iWebFusion owns and operates its hardware and nationwide BGP network, delivering consistent performance, lower latency, and increased reliability. With multiple U.S. data centers and premium multihomed bandwidth, iWebFusion backs every service with a 99.9% uptime SLA and 24/7 in-house technical support.

New AMD EPYC VPS Lineup Highlights All EPYC VPS plans include:

- AMD EPYC 9-series CPU cores
- High-performance NVMe storage
- 10Gbps network connectivity
- 1× IPv4 + /64 IPv6
- Powered by the VirtFusion Control Panel
- Deployed in Los Angeles, CA (CA2)

Available plans include:

- EPYC Micro — 2 cores, 4GB RAM, 50GB NVMe, 5TB bandwidth — starting at \$9.38/month
- EPYC Bronze — 4 cores, 8GB RAM, 100GB NVMe, 10TB bandwidth — \$18.99/month
- EPYC Silver — 8 cores, 16GB RAM, 250GB NVMe, 20TB bandwidth — \$29.99/month
- EPYC Gold — 16 cores, 32GB RAM, 500GB NVMe, 35TB bandwidth — \$39.99/month

- EPYC Platinum — 32 cores, 96GB RAM, 750GB NVMe, 50TB bandwidth — \$64.99/month
- EPYC Titanium — 64 cores, 192GB RAM, 1TB NVMe, 100TB bandwidth — \$109.99/month Additional discounts are available for prepaid terms. Full plan details and ordering information are available at: <https://www.iwebfusion.net/epyc-vps>

Built for Customization and Advanced Networking iWebFusion also offers:

- Enhanced DDoS protection
- Bring-your-own IP or provider-assigned subnets
- Custom BGP sessions and advanced routing options
- Bare metal, managed, and hybrid deployments
- Reseller and partner pricing programs

From single VPS instances to fully custom cloud and BGP deployments, iWebFusion brings a flexible, engineering-driven approach to every solution.
