

## **KHS Investments and Legal Ltd launches automated AI-powered contract risk platform led by Sunpreet Singh Chadha**

Led by Sunpreet Singh Chadha, the initiative reflects a strategic vision to merge legal expertise with automation, delivering intelligent contract risk analysis and streamlined drafting solutions to the UK market.

**Southampton, Hampshire Feb 11, 2026 ([IssueWire.com](https://www.IssueWire.com))** - KHS Investments and Legal Ltd has confirmed the development of KHS Contract AI, an automation-focused platform designed to assist with contractual risk analysis and structured agreement drafting within the United Kingdom.

The project is founded and led by Sunpreet Singh Chadha, B.A., LL.B., LL.M., Registered Foreign Lawyer (UK) and Certified International Arbitrator under UNCITRAL principles. While the initiative sits alongside the firm's advisory work, KHS Contract AI is a separate technology development aimed at supporting contract review processes rather than replacing regulated legal services.

The platform is being built to assist with the early-stage assessment of commercial contracts by identifying potentially high-risk clauses, structural inconsistencies and drafting gaps. It is intended to provide an additional analytical layer before agreements are finalised, enabling businesses and legal professionals to approach negotiations with clearer visibility of potential exposure.

In practical terms, the system is being structured to support review and drafting across common commercial instruments, including service agreements, consultancy contracts, shareholder documentation and business acquisition arrangements. The focus is on improving efficiency in preliminary contract handling, particularly in transactions where time pressures and commercial complexity often intersect.

Speaking about the development, Sunpreet Singh Chadha said:

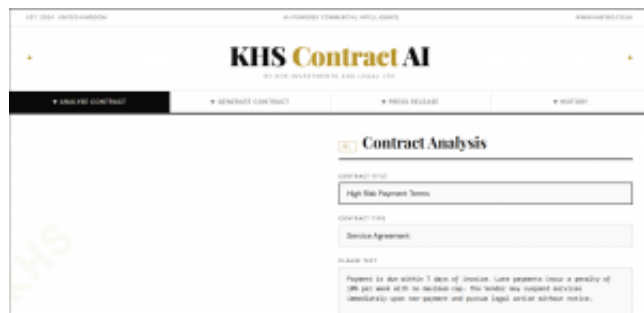

“KHS Contract AI has been developed to support legal decision-making, not to replace it. Contracts remain a matter of professional judgement. However, automation can assist in identifying patterns, inconsistencies and areas of risk at an earlier stage. The intention is to combine legal training with structured technology in a way that strengthens drafting discipline and promotes clearer risk awareness.”

The initiative reflects a broader movement within the UK legal sector toward cautious integration of automation tools. As contractual frameworks grow increasingly complex, particularly in commercial and cross-border settings, firms are exploring technologies that can enhance efficiency without undermining regulatory standards or professional oversight.

KHS Investments and Legal Ltd has confirmed that the platform remains under active development. Testing and refinement are ongoing, with particular emphasis on usability, structured logic and practical application within real-world commercial contexts. The company has indicated that any broader release will follow controlled evaluation and validation.

The development of KHS Contract AI represents a measured approach to legal technology one that seeks to support practitioners and businesses while recognising the continued central role of qualified legal professionals in advising on rights, obligations and risk.

Further details regarding pilot phases and implementation timelines are expected to be released as development progresses.
