

Logik Vorsprung Activates £2.64M Technical Foundation After 60-Day Sprint

Principal Architect Oscar Mahtani certifies 46,019 lines of proprietary code, establishing a £2,646,092 technical replacement cost for the Logik Core infrastructure.

Stoke on Trent, Staffordshire Feb 19, 2026 ([IssueWire.com](https://www.IssueWire.com)) - Logik Vorsprung Technologies Ltd has officially certified an intangible asset base of £2,646,092 following an internal technical audit of its "Logik Core" infrastructure. This valuation represents the replacement cost of a proprietary software portfolio constructed in a breaking 60-day timeframe.

The certified portfolio comprises 10 distinct assets: 6 Bespoke PWA Nodes (separate commercial entities), 2 Flagship Infrastructure Sites, the proprietary White Label Booking Engine, and the dormant but fully coded Level 2 Autonomous M.O.E. (Meta-Operating Environment).

This output was achieved by Principal Architect Oscar Mahtani without a traditional development team. By leveraging the "Logik Core" framework to manually accelerate the reskinning and deployment of banking-grade nodes, the firm has eliminated the need for the standard 5-10 person agency model. The 6 commercial nodes are currently validated at 96% completion and live status.

"We have not just built software; we have engineered a new standard of capital efficiency," states Mahtani. "Delivering £2.64M of certified, high-density logic in 60 days proves that one architect, armed with the right core infrastructure, can outperform an entire agency."

The firm is executing a manual "High-Velocity Reskinning" strategy to service the SME market via its commercial deployment vector, [Vorsprung Tech](#), reserving full autonomous activation for future scaling.

For official verification and institutional data regarding the Logik Core infrastructure, visit [Logik Vorsprung Technologies](#).

LEGAL DISCLAIMER: This document is a corporate press release. Financial figures cited refer strictly to the Technical Replacement Cost of proprietary software assets as per Internal Technical Audit LVT-MAS-2026-01. This document is not a solicitation for investment, an offer of securities, or a guarantee of future revenue. The term "Dormant" regarding the M.O.E. refers to its current autonomous deployment status; the code is tested and validated.
