Bengaluru, Karnataka Feb 19, 2026 ([IssueWire.com](https://www.IssueWire.com)) - NeenOpal, a global enterprise AI and business intelligence solutions company, announced its participation in the IndiaAI Impact Summit 2026, where discussions centered on responsible, scalable AI aligned with the themes of People, Planet, and Progress.

At Hall 3 | Booth 3P23, NeenOpal's team members Dhruv Chowdary and Betsy T Abraham are presenting practical AI applications designed to move enterprises beyond experimentation into measurable execution.

A key highlight at the booth is [Mokkup.ai](https://www.Mokkup.ai), an AI-powered platform that enables users to generate structured business intelligence dashboards from a simple prompt. The dashboards can be exported directly into Microsoft Power BI and Tableau, helping teams accelerate dashboard prototyping and stakeholder alignment.

In addition to Mokkup.ai, NeenOpal is showcasing enterprise AI automation built for real business workflows, along with scalable cloud architectures leveraging machine learning, business intelligence systems, AWS, Azure, and Microsoft Fabric.

The summit has underscored a broader industry shift: enterprises are increasingly allocating 2026 budgets toward production-grade AI systems rather than isolated pilot projects. According to representatives at the event, organizations are prioritizing governance, infrastructure readiness, and measurable ROI in AI adoption.

"AI conversations are evolving into infrastructure decisions," said a NeenOpal spokesperson. "Enterprises are no longer asking whether to adopt AI — they are focused on how to deploy it responsibly and at scale."

NeenOpal's participation at the IndiaAI Impact Summit 2026 reflects its commitment to enabling organizations to implement AI systems that deliver operational efficiency, faster insights, and long-term strategic value.

About the Company

NeenOpal is a global enterprise AI and analytics company specializing in business intelligence, automation, and scalable cloud solutions. The company works with organizations to help them transition from isolated AI experiments to structured, production-ready systems that deliver measurable business outcomes.

NeenOpal is the creator of Mokkup.ai, an AI-powered platform that enables users to generate structured BI dashboards from simple prompts and export them directly into Microsoft Power BI and Tableau. In addition to product innovation, NeenOpal provides services across machine learning, data engineering, cloud architecture, and enterprise AI implementation.
