

NGH Tree Care Launches A Bunch of Tree Care Services in Surrey, UK

Woking, Surrey Feb 11, 2026 ([IssueWire.com](https://www.issuewire.com)) - NGH Tree Care announces the official launch of their expanded tree care services. These services are designed to meet the growing needs of homeowners and businesses. After accumulating over a decade of experience, the company set a new aim for providing a broader range of services that would enhance the health, safety, and aesthetics of Surrey's trees.

What NGH Tree Care's Service Portfolio Includes

The expansion of NGH Tree Care includes a variety of new services and upgraded capabilities designed to meet different tree care needs. These services exist to ensure the health of the tree, safety, and overall curb appeal.

Their service highlights

Crown Reduction

This service is all about [tree crown reduction](#), reducing the height as well as the spread of a tree's canopy carefully. It helps the tree improve its health as well as safety. This process is essential for trees that have become too large for their environment.

Tree Felling

Tree felling is considered when the tree needs to be removed to minimise the potential hazards to people as well as property. Experts carefully remove diseased and dead trees or when they pose safety risks.

Crown Lifting

Experts choose this service when the lower branches of the tree create problems. This helps create space between the canopy as well as the ground. This service helps homeowners immensely when their focus is solely on achieving better light penetration, appearance, and clearance for pedestrians as well as vehicles.

Deadwooding

Deadwooding targets the removal of dead, decaying, or diseased branches. This is chosen to prevent the risk of falling debris, particularly in stormy conditions, and reduce the spread of disease.

Hedge Trimming

As you can guess by the name, [hedge trimming](#) is focused on improving the aesthetic value of gardens as well as properties. Homeowners call for this service when they need better airflow and reduced overgrowth.

Stump Grinding

Stump grinding focuses on removing the tree stumps after a tree has been felled. This method required specialised machinery to grind the stump below ground level. This service also eliminates the potential for regrowth as well as prevents pest infestations that may occur if stumps are left in place.

Emergency Services

As people already love services that are available 24/7, many would find it extremely helpful in situations like storms. Their emergency services for urgent tree-related issues cover fallen trees, broken branches, structural damage after storms, and many more.

Availability and Contact

According to the update, NGH Tree Care is available to assist with all tree care needs across Surrey. Besides the 24/7 availability. They offer free consultations and no-obligation quotes for residential and commercial spaces.

About NGH Tree Care

Founded by Nick Harris, NGH Tree Care draws on over 10 years of experience in the tree care industry. Nick's journey began in Surrey, where he trained in Arboriculture and Forestry, and expanded through roles in Bristol, Sweden, and Barbados, gaining expertise in everything from large-scale tree management to tropical species. After returning to the UK and leading teams as a climber, Nick launched NGH Tree Care to provide expert, reliable tree care services to Surrey, combining his global experience with a deep-rooted commitment to quality and sustainability.
