

# Productivity Startup Launches Multi-Platform Calendar Engine to Solve Global Scheduling for Remote Teams and Travelers

**New Hartford, New York Feb 25, 2026 ([IssueWire.com](https://www.IssueWire.com))** - Managing international public holidays, long weekends, and multi-year project roadmaps has traditionally required juggling multiple digital tools and cluttered interfaces. Today, a new productivity startup is solving this global scheduling puzzle with the official launch of [HolidaysCalendar.net](https://HolidaysCalendar.net) and its companion Android mobile application, the [Holidays & Event Calendar](https://HolidaysCalendar.net).

Designed for project managers, educators, and global travelers, the deterministic calendar engine provides instant, highly accurate public holiday data for over 50 countries. Unlike standard digital planners that prioritize notifications and constant screen engagement, this platform is built entirely around reducing cognitive load and digital friction.

By utilizing the platform's intuitive Search Bar, users can instantly verify local bank holidays worldwide. Furthermore, the engine is equipped with verified 2028 Data, allowing event coordinators and early planners to map out complex multi-year timelines and identify strategic travel gaps long before they occur.

“Our goal was to build a system that respects the user’s mental bandwidth,” said Derien Harleys, Founder of [HolidaysCalendar.net](https://HolidaysCalendar.net). “People are exhausted by bloated software. We wanted to provide a macro-level view of the year that users can quickly generate, print out, and then step away from their screens to actually enjoy the time they are organizing.”

To combat digital fatigue, the web interface features a native Dark Mode, optimized for late-night travel planning and schedule management without disrupting circadian rhythms. For users who prefer a tactile planning experience, the engine generates crisp, high-resolution vector PDFs utilizing custom Print Styles that save printer ink and format perfectly to physical paper.

The ecosystem is fully supported by the [Holidays & Event Calendar](https://HolidaysCalendar.net) Android app, currently available for free download on the Google Play Store. The mobile application delivers the same verified international holiday tracking in a clean, distraction-free environment, allowing users to coordinate global dates instantly while on the go.

The web platform is completely free to use and requires zero account sign-ups.

For more information, or to generate a custom multi-year schedule, visit [HolidaysCalendar.net](https://HolidaysCalendar.net). To download the companion mobile app, visit the Google Play Store at [Holidays Calendar 2026 App](https://HolidaysCalendar.net).

**About [HolidaysCalendar.net](https://HolidaysCalendar.net)** [HolidaysCalendar.net](https://HolidaysCalendar.net) is a minimalist, high-performance scheduling platform dedicated to helping users take back their time. By providing accurate, multi-year public holiday data across 50+ countries through its web engine and companion Android application, the company empowers professionals and travelers to externalize their schedules and plan with intentionality.
