# QRCalendar Launches Free Tool to Instantly Add Events to Any Calendar via QR Code

liverpool, UK Feb 13, 2026 (Issuewire.com**)** - QRCalendar.com has launched a free online tool that allows anyone to create a QR code for a calendar tevent in seconds. With one scan, users can instantly add an event to their preferred calendar app, including Google Calendar, Apple Calendar, Outlook, and iCal.

The platform is designed to remove friction from event sign-ups. Instead of typing in dates, times, and locations manually, attendees simply scan a QR code and the event details are automatically populated in their calendar.

QRCalendar is completely free to use, with no adverts, no subscriptions, and no account required.

"We wanted to build something simple that just works," said Christopher Seward, Founder of QRCalendar. "Event organisers, schools, businesses, wedding planners, gyms, and community groups all rely on people remembering dates. QRCalendar removes the barrier between promotion and attendance."

Built for Simplicity

The tool allows users to:

• Create single or recurring calendar event QR codes
• Add titles, locations, descriptions, and reminders
• Generate downloadable QR codes instantly
• Use the tool without creating an account

Unlike many QR code generators, QRCalendar focuses specifically on calendar functionality rather than generic URL links. The generated codes are lightweight, reliable, and compatible across major devices and calendar platforms.

Ideal for Events, Marketing, and Print

QRCalendar is already being used for:

• Conference and networking events
• School parents' evenings and performances
• Wedding invitations and save-the-dates
• Fitness classes and workshops
• Business meetings and webinars
• Posters, flyers, brochures, and email campaigns

Because the tool requires no sign-up, organisers can generate codes quickly and embed them into printed materials, websites, or social media graphics without delay.
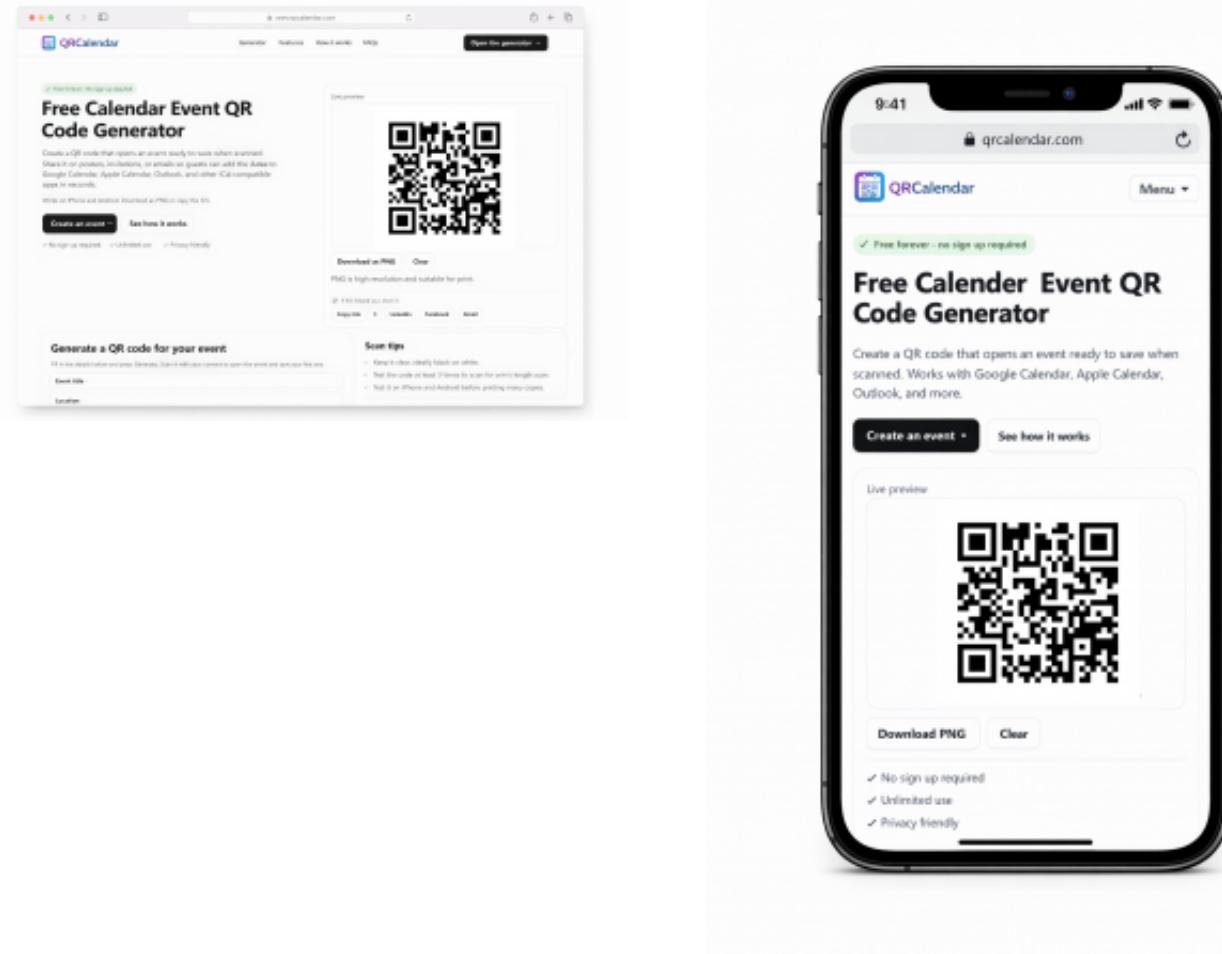

Privacy First

QRCalendar does not collect user data and does not store event information after generation. The tool runs entirely in the browser, making it a practical option for users who value simplicity and privacy.

About QRCalendar

QRCalendar.com is an independent web tool founded by TwistedFingers Ltd. in the United Kingdom for a global audience. The platform was built to simplify event management by delivering one clear function exceptionally well: creating calendar event QR codes that work seamlessly across devices.

The tool is available worldwide and free to use at:
