

## Recommended Painters WA Announces New High-Performance Grinding Equipment for Perth Projects

Strengthening Perth's concrete surface preparation with new high-performance grinding equipment.

**Perth, Western Australia Feb 22, 2026 ([Issuewire.com](https://www.issuewire.com))** - Recommended Painters WA has introduced new **high-performance concrete grinding equipment to support cleaner, safer, and more consistent surface preparation across Belmont, Perth, and nearby suburbs**. This upgrade strengthens their position as a **trusted local provider of floor grinding, epoxy floor preparation, and concrete floor grinding services for homes, commercial sites, and industrial facilities**. The new machines create smoother results, support stronger coating adhesion, and reduce delays caused by uneven or damaged concrete.

For more than 25 years, [Recommended Painters WA](https://www.recommendedpainters.com.au) has served Perth with a focus on accuracy, clear communication, and dependable service. The company adds this new equipment to improve project speed and precision while maintaining high safety standards. This investment ensures clients receive clean grinding passes, improved surface profiling, and reduced dust interruption on residential and commercial sites.

Founder Karlos Sarris shared that this upgrade reflects the company's ongoing effort to give clients better results. He stated that the new grinders help the team prepare floors with greater consistency and support stronger long-term performance for epoxy floors and concrete coatings. He explained that improved preparation is the key to preventing peeling, blistering, and early coating damage, especially in Perth's warm and busy environments.

The company's floor grinding service removes old paint, uneven patches, adhesive, and surface blemishes. The updated equipment opens concrete pores in a more controlled way, which helps epoxy coatings bond securely. This creates a cleaner foundation and supports better durability for garages, warehouses, workshops, retail areas, and outdoor surfaces. With the new machines, the team can handle small residential floors and large commercial or industrial spaces with the same level of care.

**Recommended Painters WA continues to focus on strong service standards** across every step of the job. The business is fully insured, licensed, and known for exceptional customer service. The team delivers free quotes, reliable communication, and punctual arrival times to support a smooth project experience. Many local residents choose the company because of their local knowledge, consistent workmanship, and commitment to safety.

The company has operated across Perth for more than 25 years and understands the needs of different suburbs, from compact Belmont workshops to large industrial complexes. Their long-term presence in the area helps them plan projects with confidence and adapt to local conditions. They also support property owners who need fast turnaround, reliable grinding, or strong preparation before a coating or epoxy installation.

This new equipment investment highlights the company's promise to offer dependable results for clients who want clean concrete surfaces and strong coating performance. It also supports contractors, builders, and property owners who need consistent grinding across large floors or detailed edges. The machines help reduce dust and noise, giving clients a safer and cleaner work zone during preparation.

Recommended Painters WA encourages homeowners, business owners, and contractors to take advantage of the upgraded service. The team is ready to help with floor grinding, surface correction, epoxy preparation, and complete coating support. They invite anyone planning a project to get in touch for a free quote or site assessment.

Clients can contact the company through their website or reach founder Karlos Sarris directly for advice. Recommended Painters WA remains committed to delivering accurate preparation, reliable communication, and expert service for every job.
