HYDROGEN

Walton, Kentucky Feb 2, 2026 ([Issuewire.com](https://www.Issuewire.com)) - Revive Hydrogen today announced the launch of its Intelligent High-Flow Molecular Hydrogen Inhalation Machines, designed for individuals and wellness professionals who want a simple, consistent way to incorporate molecular hydrogen into daily wellness and recovery routines.

Scientific interest in molecular hydrogen (H₂) has expanded rapidly in recent years. Peer-reviewed reviews report that searches across medical databases return **2,000+ publications** related to hydrogen gas in health contexts, reflecting growing global research activity. In addition, H2Research.org, a database that curates hydrogen-related scientific publications, notes it has organized **3,000+** publications on hydrogen's therapeutic potential. Educational and research organizations such as the Molecular Hydrogen Institute also highlight ongoing efforts to advance and evaluate molecular hydrogen research.

Revive Hydrogen's lineup includes multiple high-flow models to fit different use environments and preferences. The OLV series includes maximum flow options up to **1,500 mL/min (OLV-1500), 1,800 mL/min (OLV-1800), and 3,000 mL/min (OLV-3000)**, with selectable flow levels on each model.

The devices are built around water electrolysis and are intended for personal or professional use. The systems feature touch flow selection, a session timer with a **1–8 hour** selectable range. Built-in warning indicators—including water quality (TDS), water level, overheating, and imbalance—are designed to stop operation when a fault happens.

“Revive Hydrogen's goal is to provide a high-flow, user-friendly inhalation experience that fits naturally into wellness and recovery habits,” said a Revive Hydrogen spokesperson. “As interest in hydrogen research grows, we're focused on offering equipment that's practical, durable, and simple to operate.”
