

SEO Danmark APS launches primeindexer.com, a Google Indexing Service designed for SEO professionals

The new platform helps users get pages discovered by Google faster; based on internal tests of 500 URLs during one week, the indexing rates is approximately 90%. Results may vary, depending on the page type.

Aalborg, Nordjylland Feb 13, 2026 ([Issuewire.com](https://www.issuewire.com)) - SEO Danmark APS, a Danish software company specializing in search engine optimization tools, has announced the official launch of primeindexer.com. Primeindexer is a Google indexing service built to help SEO professionals to get their pages discovered and indexed by Google in minutes rather than weeks.

PrimeIndexer addresses a well-known challenge in search engine optimization: backlinks and even well optimized pages don't index. PrimeIndexer's proprietary indexing technology is designed to close that gap dramatically.

Based on internal tests of 500 URLs during one week, the team behind primeindexer have seen indexing rates of approximately 90%.

"No indexing means no rankings, and no rankings means no traffic. We built PrimeIndexer because too many SEO professionals and content publishers are losing momentum simply because Google hasn't discovered their pages yet. Our platform solves that problem fast — and without locking users into monthly subscription fees."

— **Jesper Nissen, Founder, PrimeIndexer.com / SEO Danmark APS**

How PrimeIndexer Works

The platform is designed for simplicity and speed. Users create an account, purchase a credit package, and submit their URLs directly through the dashboard. Each credit corresponds to a single URL. Pages submitted to primeindexer are typically indexed within two minutes.

A key differentiator of PrimeIndexer is its credit-based pricing model. Unlike competing services that charge recurring monthly fees regardless of usage, PrimeIndexer credits never expire. Users purchase credits as needed and can deploy them at their own pace.

Built for SEO Professionals

PrimeIndexer is tailored for SEO experts who need fresh articles indexed quickly, link builders who want their backlinks discovered and credited by Google. API access is available on the Professional and Enterprise plans, allowing PrimeIndexer to be integrated directly into existing tools and workflows.

The service supports all types of websites and URLs that Google allows to be indexed. The company notes that certain platforms — including Medium and LinkedIn Pulse — operate under restrictions imposed by Google itself that no indexing service can override. For all other standard web content, PrimeIndexer's technology is engineered to maximize indexing probability on the first submission attempt.

About Jesper Nissen and SEO Danmark APS

Jesper Nissen is a Danish SEO specialist and serial software entrepreneur. He is based in Aalborg, Denmark. He is the founder of SEO Danmark APS, a company focused on the search engine optimization industry. Jesper Nissen is also the creator of SchemaWriter.ai, an AI-powered schema markup generator, and YACSS (Yet Another Cloud Stacking Software), an automated platform for website generation across more than 16 platforms.

With a background in technical SEO, schema markup, and link building strategy, Jesper Nissen brings hands-on industry experience to each product he develops. PrimeIndexer represents his latest effort to remove a common bottleneck in the SEO workflow and give professionals a reliable, fast-turnaround indexing solution.

PrimeIndexer.com is now live and accepting new users. The service requires no credit card to create an account. Full pricing and package details are available at primeindexer.com.
