

8-week Information Assurance Risk Management Strategies Online Training Course

Self-paced training that empowers e-learners to effectively implement information assurance risk management strategies

Brandon, Florida Mar 25, 2026 (Issuewire.com) - With the growing trend in cyberattacks, having the knowledge and skills to deter and thwart these attacks is invaluable and required. DOC Technology Systems LLC understands this need and has developed an 8-week online course delivered through Canvas learning management system. This course enables e-Learners to define information assurance risk analysis, risk management analysis strategies, and gain the knowledge to improve policy development and compliance in alignment with National Institute of Standards and Technology recommendations and guidelines.

e-Learners will also understand how enterprise architecture relates to IT strategies, including team management, change management, and vendor management. Learners will also gain knowledge about AWS cloud intrusion detection and prevention. Learners will gain hands on experience developing IT strategy policies, including how to establish an agenda, define policy formulation, integrate methods of decision support, policy implementation, and learn how to effectively monitor and evaluate policy framework.

Learners gain knowledge about developing workplace acceptable use policy, email communication and security policy, email security policy, and data management policy as well as disaster recovery policy. This online training course can be completed at self pace. Learners must adhere to assignment submission policies and maintain a C average score to pass and earn their Certificate of Completion from DOC Technology Systems LLC.
