

DialogPay Brings WhatsApp Checkout and Unified Payments to UAE Businesses

DialogPay Launches WhatsApp Checkout & Payment Gateway in UAE

Dubai, United Arab Emirates Mar 31, 2026 (IssueWire.com) - DialogPay has formally introduced its unified checkout and [payment gateway](#) platform to the UAE market, enabling businesses to accept secure payments across WhatsApp, websites, mobile apps, and other messaging channels from a single system.

Developed by Dubai-based technology firm [Grafdom](#), DialogPay combines conversational commerce with [full-stack payment infrastructure](#). The platform allows customers to browse, interact, and complete transactions directly inside WhatsApp while also supporting traditional website and mobile app checkout.

As digital commerce in the UAE continues shifting toward messaging-first interactions, DialogPay provides businesses with the ability to turn conversations into secure payments without forcing customers to switch platforms.

Unlike standalone gateways that focus only on website transactions, DialogPay supports:

- In-chat checkout on WhatsApp and messaging platforms
- Website and mobile app payment integration
- Hosted checkout pages and payment links
- Shopify and WooCommerce plugin integrations
- API-based custom deployments

DialogPay is PCI DSS compliant and operates as an Official Meta Business Partner, leveraging WhatsApp Business API infrastructure to support verified messaging, structured payment flows, and broadcast communication.

In addition to its unified checkout capabilities, DialogPay offers competitive transaction rates designed to support startups, SMEs, and growing enterprises in the UAE. The company follows a transparent pricing approach, allowing businesses to scale their payment operations without complex fee structures or hidden costs.

The platform is built for both local and global coverage, supporting international payment methods while maintaining localized relevance for UAE and GCC businesses.

“Today’s customers expect to pay where the conversation happens,” said **Adnan Shakir, CEO of DialogPay**. “Whether that conversation begins on WhatsApp, Instagram, a website, or a mobile app, businesses need one secure checkout experience that connects everything. That is what DialogPay delivers.”

DialogPay positions itself as more than a chat tool. It operates as full-stack payment gateway infrastructure that unifies messaging, automation, and checkout across channels, giving businesses a single system to manage customer engagement and transactions.

Businesses can activate the system through direct API integration, ready-to-use plugins, or instant payment links, making it accessible for startups, SMEs, and enterprise-level organizations.
