

DOCTTO: The Architect of Modern Healthcare Launches AI-Powered Consultation Platform

Redefining the patient-doctor connection through seamless, instant virtual care and intelligent triage.

Khammam, Telangana Mar 25, 2026 ([Issuewire.com](https://www.issuewire.com)) - DOCTTO Unveils AI Triage to Streamline Patient-Doctor Consultations

DOCTTO, a leader in digital health innovation, today announced the launch of its integrated AI Triage system within the DOCTTO App platform. This advanced feature is designed to bridge the gap between patient symptoms and professional medical advice, ensuring faster, more accurate, and highly personalized doctor consultations.

Transforming the Patient Intake Experience

The new AI Triage assistant acts as a digital first-point-of-contact, utilizing Natural Language Processing (NLP) to interpret patient concerns in plain language. Unlike traditional static forms, the AI engages users in a dynamic, empathetic dialogue, asking tailored follow-up questions—much like a physician—to gather a comprehensive medical history before the actual consultation begins.

Key Benefits for Patients and Providers

* **Reduced Wait Times:** By automating the initial assessment, the system can categorize the urgency of cases (critical, urgent, or routine) in under three minutes. This allows the app to fast-track high-risk patients to immediate care while providing self-care guidance for minor ailments.

* **Enhanced Consultation Quality:** Doctors receive a structured, AI-generated summary of the patient's symptoms and history prior to the call. This eliminates repetitive data gathering, allowing medical professionals to spend more time on diagnosis and personalized treatment plans.

* **24/7 Virtual Access:** The AI Triage tool is available around the clock, providing instant guidance during nights, weekends, or holidays when traditional clinics may be closed.

* **Improved Accuracy & Safety:** Using machine-learning algorithms trained on millions of clinical data points, the system identifies subtle "red-flag" symptoms that might be overlooked in a rushed manual intake.

Commitment to Security and Trust

Built with a "privacy-first" architecture, DOCTTO App ensures that all data processed by the AI Triage system is fully HIPAA-compliant and protected by enterprise-grade encryption. The tool serves as a Clinical Decision Support (CDS) aid, ensuring that final medical authority always remains with the human healthcare practitioner.

"Our goal isn't to replace the doctor-patient relationship, but to strengthen it," said Dr T.Nagarjun , Ceo at DOCTTO. "By using AI to handle the administrative and preliminary assessment burden, we are giving doctors more time to do what they do best: heal patients."

About DOCTTO: "DOCTTO is pioneering telemedicine ecosystem designed to make healthcare borderless, immediate, and profoundly personal. By integrating intelligent triage with seamless virtual consultations, we are redefining what it means to be 'cared for' in the digital age."
