

Dr. Electric Helps Colorado Springs Homeowners Prepare Homes for Summer Electrical Demands

Family-owned electrical contractor with decades of experience and BBB A+ rating offers same-day service for air conditioning and cooling system electrical needs.

Colorado Springs, Colorado Mar 23, 2026 ([Issuewire.com](https://www.issuewire.com)) - Dr. Electric, a licensed and insured residential electrical contractor serving the Colorado Springs area, announces its focus on helping homeowners prepare electrical systems for summer cooling demands. With decades of experience and a BBB A+ rating, the family-owned business emphasizes that proper electrical infrastructure ensures air conditioning systems operate efficiently and safely throughout Colorado's hot summer months.

Founded by Rick, owner of Dr. Electric, the company has built a reputation for combining speed with professionalism while serving residential clients across Colorado Springs, Peyton, Black Forest, Monument, Manitou Springs, Old Colorado City, Falcon, Green Mountain Falls, Glen Eagle, and Fountain.

"Summer in Colorado Springs means air conditioning systems running constantly, and that puts significant electrical load on your home," said Rick, owner of Dr. Electric. "We help homeowners ensure their electrical systems can handle that demand safely. Whether you need dedicated circuits for new AC

units, panel upgrades to support cooling systems, or repairs to address flickering lights when the AC kicks on, we're ready with same-day service."

Dr. Electric specializes in residential electrical services with a hyper-focus on speed and efficiency—getting jobs fixed quickly but professionally. The company offers same-day service to address urgent electrical needs, recognizing that electrical issues affecting cooling systems require prompt attention.

Summer electrical preparations often focus on air conditioning and cooling system support. Homeowners increasingly need electrical infrastructure that handles modern cooling demands including dedicated circuits for central air conditioning units, proper amperage for efficient AC operation, electrical connections for window units and portable coolers, ceiling fan installations for supplemental cooling, and panel capacity assessment for cooling system additions.

As a family-owned business, Dr. Electric takes pride in its BBB A+ rating, reflecting consistent commitment to customer satisfaction and quality workmanship. The company's licensing and insurance provide peace of mind for homeowners seeking reliable electrical services.

Dr. Electric offers free estimates, allowing homeowners to understand scope and cost before committing to service. This transparent approach has contributed to trust the company has built throughout the Colorado Springs area over decades.

"Our hyper-focus is on speed and efficiency—getting the job fixed quickly but professionally," Rick explained. "When your AC isn't working properly because of electrical issues, you need help now, not next week. That's why we offer same-day service while maintaining the high standards our BBB A+ rating reflects."

Summer electrical issues often reveal themselves when cooling systems start operating. Breakers tripping when AC units cycle on, lights dimming when cooling systems engage, insufficient power for multiple window units, and overheated electrical panels all indicate electrical systems struggling with cooling demands.

The company handles comprehensive residential electrical services related to summer cooling including dedicated circuit installation for AC units, electrical panel upgrades to support cooling loads, ceiling fan installation and wiring, outdoor outlet installation for portable cooling units, and electrical troubleshooting for AC-related problems.

Dr. Electric's decades of local experience provide solutions tailored to Pikes Peak region homes and Colorado Springs climate demands. Understanding local electrical codes, common issues in area homes, and solutions that work reliably in Colorado conditions ensures electrical work supports cooling needs effectively.

Rick emphasizes that proactive electrical assessment before summer heat arrives prevents mid-summer emergencies when families need cooling most. Addressing electrical capacity issues now ensures air conditioning systems operate safely and efficiently when temperatures peak.

The company's same-day service capability ensures homeowners can address urgent electrical issues without lengthy delays. This rapid response, combined with professional workmanship, helps families maintain comfortable homes throughout Colorado Springs summers.
