

Emplofy.ai Launches AI Job Search Co-Pilot in Private Beta

NYC-based startup Emplofy.ai introduces an AI-powered co-pilot that helps candidates turn job search into a measurable, strategic process

New York City, New York Mar 23, 2026 ([Issuewire.com](https://www.Issuewire.com)) - [Emplofy.ai](https://emplofy.ai) today announced the upcoming launch of the private Beta of its AI powered job search platform, scheduled for the second quarter of 2026. The company is developing an AI job search co-pilot designed to help professionals better understand how the modern hiring market works and how they can position themselves more effectively when applying for new roles.

For many professionals, job search has become increasingly complex. Candidates often submit dozens of applications without receiving meaningful feedback. At the same time, hiring decisions are increasingly influenced by automated screening systems and data driven evaluation processes.

Emplofy.ai is building a platform intended to bring more transparency to that environment.

Instead of focusing only on resume generation or automated applications, the platform analyzes patterns in the job market and helps professionals understand how their experience, skills and positioning align with the signals employers respond to during the hiring process.

The goal is to help candidates approach job search in a more structured and informed way.

“Many professionals approach job search without understanding how hiring systems interpret their experience,” said Glen Saprykin, Chief of Staff of [Emplofy.ai](#). “People send applications without knowing which signals employers actually respond to. Our goal is to give candidates clearer visibility into how the market evaluates talent.”

The upcoming private Beta will provide early access to a limited group of users who will test the platform while the company continues refining its technology.

The launch comes at a time when artificial intelligence is rapidly transforming how companies evaluate candidates. Employers increasingly rely on automated tools and structured hiring signals to identify relevant talent. As a result, how professionals present their expertise has become as important as the expertise itself.

Emplofy.ai is designed to act as a job search co-pilot, helping professionals navigate these changes and approach their career search with greater clarity and strategic insight.

The private Beta rollout is expected to begin early in the second quarter of 2026. Professionals interested in early access will be able to join the waitlist ahead of the Beta launch.

About

[Emplofy.ai](#) is a New York-based AI startup redefining how professionals approach job search. By turning fragmented and unpredictable processes into structured, data-driven systems, the platform helps candidates gain clarity, improve positioning, and increase their chances of success.
