

HomesOps Launches AI-Powered Platform to Modernize Home Service Businesses

New digital platform helps HVAC, plumbing, roofing, and home service companies automate bookings, manage technicians, and improve customer experiences.

Chicago, Illinois Mar 19, 2026 ([IssueWire.com](https://www.issuewire.com)) - HomesOps announced the launch of its AI-powered home services platform designed to help service businesses streamline operations, manage field teams, and deliver faster customer support through intelligent automation.

The platform enables home service companies to digitize their entire workflow, from service booking and technician dispatching to customer communication, invoicing, and performance analytics. By bringing these operations into one unified system, HomesOps aims to help businesses reduce operational inefficiencies and improve service delivery.

Across the home services industry, many companies still rely on manual scheduling, disconnected tools, and phone-based booking systems. These outdated processes slow down response times, create scheduling conflicts, and limit business growth. HomesOps addresses these challenges by introducing automation and AI-powered workflows that simplify service management.

*“Home service businesses are under increasing pressure to respond faster and operate more efficiently,” said **Vikrant Jain, Founder of HomesOps.***

“HomesOps was built to give service companies the digital tools they need to manage jobs, technicians, and customer interactions in one intelligent platform.”

The platform includes a range of features designed specifically for home service operations. Customers

can book services through a mobile or web interface, while businesses can automatically assign technicians based on location, availability, and job requirements. Real-time job tracking keeps customers informed while allowing businesses to monitor service progress.

HomesOps also provides integrated payment processing, digital invoicing, and customer management tools, allowing service providers to manage operations without relying on multiple software platforms.

The solution is designed for businesses across several service categories including HVAC services, plumbing, roofing, electrical maintenance, and general home repair services. By providing a branded digital platform, HomesOps allows service providers to launch their own customer-facing apps while maintaining control over operations and customer relationships.

Industry demand for digital transformation in home services has grown significantly in recent years as consumers increasingly expect faster response times, online booking options, and transparent service tracking. HomesOps aims to help service providers meet these expectations while improving operational efficiency.

The platform is now available for service companies looking to modernize their business operations and deliver a more seamless customer experience.
