

IT Path Solutions Launches All Cloud Hub, a Unified Dashboard to Manage Multiple Cloud Storage Drives in One Place

The new platform lets users search, move, and sync files across Google Drive, OneDrive, Dropbox and pCloud from a single dashboard - with Google Photos and iCloud integrations announced as the next addition to the platform.

Mooresville, North Carolina Mar 25, 2026 ([IssueWire.com](https://www.IssueWire.com)) - IT Path Solutions, a global technology company with over 14 years of experience building web and mobile software solutions, today announced the launch of [All Cloud Hub](#), a cloud storage management platform that brings multiple cloud drives under a single, unified dashboard.

The product is now publicly available, enabling individuals to manage, search, transfer and sync files across their cloud storage accounts without switching between platforms.

"Managing files across multiple cloud drives has always meant constant tab-switching, duplicate downloads, and lost time. All Cloud Hub removes that friction entirely. We built this so that individuals can have complete clarity and control over all their cloud storage from one place."

— IT Path Solutions Product Team

One Dashboard for Every Cloud Drive

All Cloud Hub connects to Google Drive, OneDrive, Dropbox, and pCloud through secure OAuth 2.0 authorization.

Once connected, users see all their files and folders across every linked account in a single, unified view the platform calls FilesVerse. Files remain in their original cloud accounts at all times, All Cloud Hub never stores, copies, or caches any data.

Setup takes under one minute, and users can connect up to three cloud storage accounts on the free plan, with unlimited accounts available on the Power User plan.

Core Features at Launch

- **FilesVerse, A Unified Dashboard:** All connected cloud drives appear in one clean view. Users can browse folders, check storage usage, and access recent files without opening separate apps or browser tabs.
- **Multi-Cloud Search:** FilesVerse Search queries all connected cloud accounts simultaneously, returning results from every drive in a single list, eliminating the need to search each service individually.
- **Drag-and-Drop Cloud-to-Cloud Transfer:** Users can move or copy files between any two connected cloud drives directly, without downloading files to a local device first. Transfers are streamed securely between providers.
- **Folder Sync:** Folders can be kept in sync across cloud drives. Manual sync is available on the free plan; power user accounts gain access to automatic sync powered by official webhooks from Google, Dropbox, and OneDrive. pCloud doesn't provide such webhooks, so we came up with a solution for our users.

- **Inline File Preview:** Documents, images, and videos can be previewed directly inside All Cloud Hub without downloading them to the user's device.

Built for Privacy and Security

All Cloud Hub was designed with a privacy-first architecture. The platform uses OAuth 2.0 for all cloud provider connections, meaning user credentials are never seen or stored by All Cloud Hub.

Access tokens are encrypted using AES-256 and the platform has completed CASA Tier 2 verification for the Google API Services program, independently assessed by TAC Security.

Users can revoke All Cloud Hub's access to any connected cloud account at any time, directly from the dashboard or from the individual cloud provider's settings. Temporary session data is automatically cleared on disconnect.

- OAuth 2.0 authentication ensures that credentials are never stored
- AES-256 encrypted access tokens
- No file storage ensures that the files never leave the user's cloud account.
- CASA Tier 2 verified for Google API Services (assessed by TAC Security)

Availability and Pricing

All Cloud Hub is available now at allcloudhub.com. The platform offers two plans:

- **Free Plan** - It is forever free, includes FilesVerse unified dashboard, multi-cloud search, up to 3 connected cloud accounts, cross-cloud file move and copy, drag-and-drop transfers, manual folder sync, and customer support as well.
- **Power User** - For early users, first 3 months are completely free. After that, continue with our yearly plan at \$49 per year. This includes unlimited cloud accounts, automatic folder sync, smarter file distribution, faster transfer speed and priority support with 24 hours.

Expanded Integrations Coming Soon

IT Path Solutions has confirmed that Google Photos and iCloud will be added to All Cloud Hub as upcoming integrations. These additions will allow users to connect their media and file storage ecosystems alongside existing platforms such as Google Drive, OneDrive, Dropbox, and pCloud, all within a single unified dashboard.

With Google Photos integration, users will be able to manage their photo and video libraries alongside documents and files, eliminating the need to switch between separate platforms. The addition of iCloud will further extend this capability, enabling users within the Apple ecosystem to access and organize their cloud data more seamlessly.

Together, these upcoming integrations address a common challenge faced by modern users: managing files and media across different services and ecosystems. By bringing both file storage and media libraries into one interface, All Cloud Hub aims to deliver a more complete and centralized cloud management experience.

About IT Path Solutions

IT Path Solutions is a global technology company headquartered in the United States, with development centers in India, Canada, the UK, and Australia. With over 14 years of domain experience, the company builds web applications, mobile apps, AI-powered tools, enterprise platforms, and SaaS products for startups and enterprises across industries including healthcare, fintech, education, logistics, and e-commerce. IT Path Solutions is an ISO 27001:2015 certified company.
